Computers & Memory Upgrades

New Atari Mega STE-16 (Monitor Sold Separately)

UN-BEATABLE Z-RAM Upgrade Sale

2 Megs- \$174.95, 4 Megs-\$279.95...Save!

Hem and Haw no more... The cost of upgrading your Atari 520ST, 520STfm, or 1040ST just came smashing down to a new level of affordability. So, now's the time to buy!

Our Z-RAM upgrade boards are easy to install and well supported by their inventor, Abu Zubair. If you're looking to upgrade with the least amount of hassle, this is the board to buy. Installation is solderless. Open the case, fit the two connection points, and you're a multi-megabyte master. If you have a problem, Abu will either talk you through it or perform the installation for you.

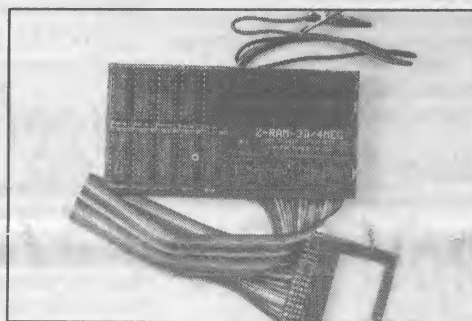

We offer 3 versions of Z-RAM Upgrades: The Z-RAM2 upgrades your ST to 2-2.5 megabytes depending on whether you have a 1040 or 520. The Z-RAM4 upgrades your ST to 2-4 megabytes. This one fits STs with internal drives only... too thick for the older external drive models. The Mega-2 ZRAM upgrades your Mega ST to 4 megabytes. (Please note: These upgrades are not for the STE models.)

These prices include RAM chips... nothing else to buy. Take advantage of this terrific savings and order your Z-RAM Upgrade today!

242-231 ZRAM2 Upgrade 2 lb. \$174.95
(Yields 2-2.5 Megs Total RAM)

242-216 ZRAM4-25 Upgrade 2 lb. \$184.95
(Yields 2-2.5 Megs-Upgradeable to 4 Megs)

242-217 ZRAM4-40 Upgrade 2 lb. \$279.95
(Yields 4 Megs Total RAM)

Z-RAM Upgrade Memory Board

Mac Clone Turbo Notebook

Macintosh Compatible, Notebook Sized, Complete System

The Outbound Mac Clone Turbo Notebook

Mini-Review by Eben Brown

Our new Outbound Notebook is fully Macintosh II compatible. It includes factory installed, genuine Apple Mac ROMs, System software, etc... everything. Its 68000-20MHz microprocessor makes it faster than most personal computers... that's why we call it Turbo. And its small size and weight (8.5 x 11 x 2.1 inches, 6.25 lbs. w/ battery) are why we call it a Notebook. Oh, but there's so much more to this little beauty!

The 640x480 black on white LCD backlit display has a 100 ms refresh rate... easy on the eyes. The revolutionary keyboard mounted TrackBar gives space savings and improves over plug-in mice or keyboard trackballs... it's right beneath your thumb along with the space bar! There's a separate speaker and microphone built in above the keyboard. Batteries are standard rechargeable camcorder type and last up to 3 hours. The 3.5 inch floppy reads 400K, 800K, or 1.4 meg Mac disks as well as 720K and 1.44 meg MS-DOS disks... swap files with pretty much anybody! The standard 2.5 inch 20 meg hard drive is upgradeable to 40 or 60 megs. The standard RAM is 2 megs upgradeable to 2.5 or 4megs with SIMMs.

Yes, the Outbound Notebook is upgradeable! Internal connection points abound and are easily accessible. You can upgrade the CPU to a 68EC030 or 68030. You can add a 68881 math co-processor. There's an optional Silicon disk capability which uses CMOS SIMMs... 12-60 meg capacity!

The basic Outbound Notebook 2000 comes with 68000-20MHz CPU, 20 meg hard drive, 2 meg RAM, battery, and AC Adaptor. If you've been considering a Macintosh compatible, this is the one to get. Suggested Retail is \$2,900... Save \$400 by ordering directly from E. Arthur Brown Company at our special introductory price... Only \$2,495!

516-400 Outbound Notebook 8 lb. \$2,495

ATARI STE-8 AND MEGA STE-16

Choose Your Best Combination of Price, Power, and Speed

by Eben Brown

The latest in affordable high powered computers comes from Atari Corporation in their STE line. STEs are an enhanced version of the original Atari ST and come in two configurations: The STE-8 is the familiar everything-in-a-keyboard styled computer that operates at 8MHz. The Mega STE-16 is a separate keyboard and CPU box configuration that operates at 16MHz and includes a 50 meg internal hard drive. We offer both types of STEs in various memory configurations at very attractive prices.

Overall Atari STE Features

The Nice thing about STE computers is that there is nothing more to buy other than a monitor and software. They have Motorola 68000 CPUs (same as Macintosh), 1-4 megs of RAM, high speed "Blitter" graphics, Advanced "Windows" type Rainbow TOS operating system with GEM included on internal ROM, Stereo sound, 4096 Color Palette, External GENLOCK capability, Serial and Parallel ports included, TV OR VCR Port included, Hard Disk/DMA/Laser port included, Internal Double Sided 3.5 inch floppy drive included, External floppy port included, MIDI (music) ports included, low, medium, and high resolution monitor output included (order monitor separately), Mouse and Joystick ports included, accessory cartridge port included... If you compare an Atari STE to most PC/XT/AT or SX clones, you'll have to pay a fortune for all of the add-on controller boards to get all of the extra ports that are included with Atari STE computers!

Atari STE-8

We offer the Atari STE-8MHz computer configured with 1 or 4 megabytes of RAM. This is a great computer system... Low priced and compatible with all existing Atari ST/STE hardware so that you can build onto it with external hard drives, laser printers, etc.

Atari Mega STE-16

We offer the Mega STE 16MHz computer configured with 2 or 4 megabytes of RAM and including an internal 50 megabyte hard drive. The main advantage here is speed. Running at 16MHz, the Mega STE-16 can be best appreciated with graphic intense applications such as Desktop Publishing. You'll have to balance the greater expense of a Mega STE 16 against its 16MHz speed and the 50 megabyte hard drive that comes with it.

226-210 1 Meg Atari STE-8 19 lb. \$399.95
226-240 4 Meg Atari STE-8 19 lb. \$599.95

Standard Atari STE-8 (Monitor Sold Separately)

226-320 2 Meg Mega STE-16 24 lb. \$1,299.95
226-340 4 Meg Mega STE-16 24 lb. \$1,449.95

386SX-20MHz Notebook... \$1495!

1-5 Meg RAM, 20-60 Meg Hard Drive, 640X480 VGA,... More!

Review by Eben Brown

Our new Ultra 386SX Notebook computers are revolutionary in design, power, and price. These are lap or desktop portables with enough power to be your main computer. They run on NiCAD batteries or AC house current and weigh only 7 lbs... including the batteries! All of this in a machine the size of a phonebook (11.8 x 8.3 x 2.0).

These Ultra 386SX Notebooks are full function 386SX IBM-compatibles with a super fast 20MHz 80386SX processor and socketed for a 387SX math co-processor. They come with 1 meg of RAM which is expandable in 1 or 4 meg increments up to 5 megabytes. In addition there is 64K onboard to support EMS 4.0 (Extended Memory). A 1.44 meg 3.5" floppy is standard. You can have your choice of 20, 40, or 60 meg hard drives... all of which function perfectly whether you're using battery or AC-power. The keyboards are full featured with 83 keys and LED status indicators. MS-DOS is included, of course.

The displays on these Notebooks are really amazing. They feature a 9" diagonal supertwist LCD of amazing resolution: 640X480 with 32 gray scale emulation... That's resolution more than adequate even for desktop publishing! You can operate it in VGA, EGA, CGA... This flat little LCD screen beats many of the best video monitors!

Now for the convenient extras: Your Ultra 386SX Notebook comes with two 9-pin serial ports, one 25-pin parallel (printer) port, one external keyboard port, one external monitor port, one external floppy port, and easy access to the RAM upgrade connectors. There are no additional controller boards or interfaces to buy. It comes with a rechargeable NiCAD battery pack as well as an AC Adaptor... (Batteries last up to 3 hours per charge). It even comes with a carrying case!

Now for the fun part... You can get this terrific Ultra 386SX Notebook computer from E. Arthur Brown Company for an un-believable price. Everybody likes a good deal! Order your new Ultra 386SX Notebook today!

ULTRA 386SX-20MHz PRICES...

LDW POWER (v.2) SPREADSHEET

Ultra-Fast, Powerful, Easy To Use, Lotus 1-2-3 Compatible

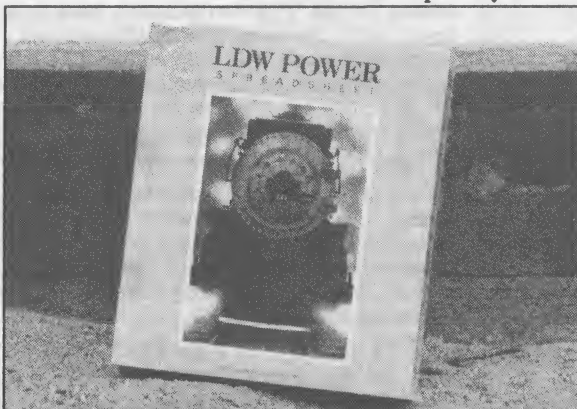

Our LDW Power spreadsheet is just what you need for simple to advanced modeling of business or scientific data projections, storage of data, accounting, etc. As a computer spreadsheet, it allows you to assign formulas to the cells. But it offers all of the bells and whistles available on only the most expensive spreadsheets.

Of course, it can read and write the industry standard Lotus 1-2-3 files (Rel. 2). You can switch between a Lotus-like user interface or the easy point and click GEM. LDW Power is lightning fast in scrolling and calculation, allows simultaneous use of up to four windows, and even has a "condensed" display to allow up to 28 rows in a window! You can hide columns, access 18 different display formats, customize the monetary format, align labels and numbers, use bold and underline types, use notes for every cell, access almost 300 commands... the list goes on and on.

Arithmetically, LDW Power offers more than 80 functions including string functions with fast minimum recalculation. You can graph your data as XY, line, bar, stacked bar, or pie chart with automatic and manual scaling and optional grid, average, and standard deviation lines. SIDEWAYS PRINTING INCLUDED! Especially nice for those really wide spreadsheets.

LDW Power gives you sophisticated file handling capabilities: Saving and retrieving of partial worksheets, external file links, data parse command, import of ASCII files, conversion into Lotus format, etc. As a database, it can Quick sort, do sophisticated data queries, use criteria involving formulas and logical operators, allow single and double variable data tables... it even does frequency analysis. LDW Power supports a macro language fully compatible with Lotus 1-2-3 and features a macro recorder, support for long macro names, and an unlimited number of macros.

Add the power of a professional spreadsheet to your Atari ST/STE computer system. Note: This is the new 2.0 version of LDW Power, Order today! (Runs on all ST/STEs with 512K or more of RAM)
280-755 ST LDW Power (v.2) 3 lb. \$109.95

Productivity

Draft Plus Companion

Advanced Guide/Utilities for GFA Draft Plus

Richard Walsh has produced what appears to be the definitive Inside Tips book on using GFA Draft Plus to its maximum capability. He should know... he makes his living full time producing drawings with his Atari ST and GFA Draft Plus!

There are many functions and capabilities of Draft Plus which simply aren't mentioned or explained in the original manual: Text entry, Drawing to Scale, Using CAPTURE RADIUS, Curves, Circles, getting corners to meet perfectly, Arrow Heads, Using Hatch patterns, Arcs, and other functions that you can get more out of with a little practical knowledge.

An area of especial interest is the use of COMMANDS. The manual doesn't tell you that beyond entering coordinates, it also gives the ability to enter text... to read macro files previously stored in a disk file! Walsh uses this to merge specification text files into his drawings. More inside tips discuss the SYMBOLS function and how it can be used to merge two drawings into one.

Finally, the GFA Draft Plus Companion includes a set of utility programs which Walsh has developed to the program's practical value to his business. These include the following: BEAM - a utility for testing wood or steel beam size and strength; CONV_TEXT - a utility for converting standard ASCII text files into GFA Draft Macros for insertion into drawings; CONV_VECT - a utility for converting survey data into absolute coordinates and then into a Draft Macro file for insertion into drawings; PLOT2MAC - converts a plot file from any drafting program into a Draft Macro for use with GFA Draft Plus; PROCURE_8 - creates a Draft Macro file from horizontal and vertical data so you can draw land profiles; ROAD - creates a Draft Macro file from survey data which can then be used to draw road plans; X_SECT - creates a Draft Macro from horizontal and vertical data to draw cross sections of land; SECTION - same as above for cross sections of buildings; ROAD_CURV - calculates unknown values so that you can figure out the proper curvature of a road and draw it properly.

If you have GFA Draft Plus, this Companion package is a must. Order your's today!

251-900 Draft Plus Companion 1 lb. \$14.95

ATTN: HP DeskJet Owners... NEW SOFTWARE!

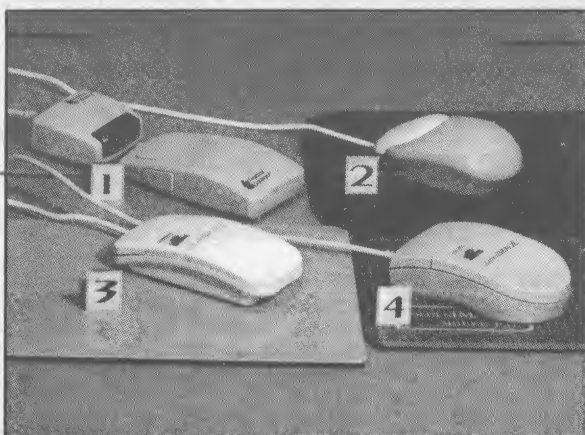

Our new DeskJet Utilities Pak is an assortment of handy programs designed to optimize your printer for Atari ST usage. For example, it includes a DeskJet Setup accessory similar in principle to the standard Atari Printer Setup accessory, only specifically designed for the HP DeskJet printer. It allows custom configuration of default font, character set, and many other options. And, it prints Degas, Degas Elite, MacPaint, Pseudo MacPaint, and .IMG files.

The DeskJet CPX utility takes advantage of Atari's new Extensible Control panel allowing configuration of font and other options. The DeskJet Mailing Label Printer imports Delimited ASCII files and formats them for print on Avery Laser Printer Labels with many configuration possibilities. DeskJet Disk Labeler reads directories from floppy disks and prints them in user customizable format on Avery Diskette Labels. And, the DeskJet Envelope Printer prints envelopes fed through the envelope tray, maintains a list of up to three return addresses, and allows editing of addresses from within the program.

Also included are a replacement for the ALT-HELP screen dump process, a text compressor (saves paper by printing in microprint), a picture format converter, and a NEODESK 3.0 compatible icon set for use with all of these programs. If you own a DeskJet printer, you should order this utility pak. Call us today!

280-919 DeskJet Utilities 1 lb. \$29.95

For Your ST/STE... Four Super Mice

#3 New! ST Optical Mouse

Totally Optic, Ultra High Resolution

Our new G.I. Optical Mouse is a zero maintenance unit which I think offers the absolute smoothest operation of any other ST compatible mouse... PERIOD! It comes with a mouse pad that is actually a Coordinate Grid. Instead of sensing roller ball movement, this mouse uses optics to detect its position on the grid. And smooth? It doesn't roll, it floats! The grid/pad is shiny smooth and the G.I. Optical Mouse glides across it on what appear to be ultra-suede pads. I have never used a mouse that moved so smoothly. There is no roll-by or skidding. The pointer stops exactly where you stop everytime.

The switch buttons are yet another smoothness plus. There is a heavy feel to them... yet a very short movement. This mouse must have been originally designed for other computers as it has 3 buttons. Just use the outside left and right buttons for Atari ST.

Our G.I. Optical Mouse operates at ultra-high 250 dpi resolution. There are no rollers to get dirty or break down. It is super precise and smooth... I've switched to it for my Desktop Publishing... shouldn't you? 10 Day Free Trial, 1 Year Warranty! Order today!

#4 Super Ultra-Rez Corded Mouse w/Pad

Yes we have a mouse with yet higher resolution! Our new G.I. OptoMech Mouse operates at 280 dpi... making it the highest resolution mouse available. Being opto-mechanical means it has a roller ball movement sensing mechanism. So, it doesn't glide quite as smooth as our G.I. Optical Mouse (above). But, it is far smoother than the standard Atari mouse... and nearly twice the resolution! Though the switch buttons are not quite as short a throw as the Atari mouse, they have a very crisp action... you get definite and predictable action from them.

Our G.I. OptoMech Mouse comes with its own mouse pad, a full year warranty, and of course our EABCO 10 Day Free Trial. Order Your's Now!

275-300 ST Cordless Mouse 2 lb. Just \$84.95!

341-300 ST Beetle Mouse 2 lb. Only \$39.95!

155-300 ST Optical Mouse 2 lb. Just \$49.95!

155-310 ST OptoMech Mouse 2 lb. Just \$39.95!

Review by Eben Brown

Never have there been so many replacement mouse options for Atari ST Owners! And they're not just to replace a broken Atari mouse... they're actually superior mechanisms and technology you'll want to use to get more from your computer and software. The original ST Mouse has only 150 dots per inch (dpi) resolution and plain old steel rollers and axles. These new mice offer 200+ dpi and use space age materials like teflon and nylon... to roll smoother and last longer... check 'em out!

#1 Cordless Mouse w/Deluxe Paint

Our Cordless Mouse is the answer for ST owners who hate the clutter and tangle of their mouse cable. You connect the receiver to your mouse-port and position it in front (up to 5 feet away) of the Cordless Mouse. Turn it on and the mouse gives superb point, click, drag... with no cord to get in your way.

This Cordless Mouse uses advanced infrared signal technology which means it doesn't have to be directly in front of the receiver. I've had perfect function from it even when operated at a severe (~70 Degree) angle to the receiver. Using an 8 bit, 12 MHz CPU, our Cordless Mouse operates at high resolution (200+ dpi) with a tracking speed of 600 mm/sec. You'll notice the difference in response immediately. The buttons have a short stroke and crisp "click" feel. Two AAA batteries power the unit so you'll like the automatic shut-off feature... which conserves batteries. As a bonus, we include Deluxe Paint graphic software with each Cordless Mouse. Order one, you'll love it!

#2 ST Beetle Mouse w/Mouse Pad

Our ST Beetle Mouse features a hand fitting, ergonomic shape that's not only beautiful, but functional! Its opto-mechanical mechanism gives high resolution (320 dpi) and uses super slick teflon materials for pads and rollers. Short throw switch buttons give the ST Beetle Mouse a superior "feel". If you point, click, drag, or draw with programs that have intricate capabilities (ie. DTP or CAD), this mouse is for you! Try it for 10 days... If you don't like it, send it back in new condition with original packaging and documentation... we'll give you a refund less shipping.

Juggler II Sale... \$12.95

Juggler II is about the nearest thing to multi-tasking on the Atari ST. It lets you keep up to seven GEM programs resident in memory and switch between them while you work! No need to save, close, and quit each time you switch to another program/application. And when you're ready to come back, Juggler II returns you to the same place where you left off.

Juggler II can be configured to automatically load a set of GEM programs. It works with any that interact correctly with desk accessories, any Atari ST (the more memory the better), in color or monochrome. If you missed it when it was \$50, don't pass it up this time... It's only \$12.95 from E. Arthur Brown Company!

250-111 Juggler II 2 lb.

List \$50 Our Price Only \$12.95

Michtron OverStock

One of our suppliers was moving to a new building and didn't want to move a bunch of inventory. Turns out it was top quality Michtron software... so we bought it for a song and can now offer it to you at tremendous savings. These are all brand new merchandise in factory fresh retail packaging. ProText. Imported from Europe, ProText is truly a professional, powerful, word processor. It combines the features of a word processor, text editor, and command line interpreter... along with a spelling checker, mail merge and file conversion. We only have 45 of these. Originally priced at \$200, your's for only \$29.95. C-Breeze. If you program in C language, C-Breeze is the editor that will make your programming easier, more efficient, and more enjoyable. Not just a text editor, it is custom designed for C language, giving advanced editing capabilities, direct access to your compiler and its utilities, and integrated into a self documenting GEM based environment. We only have 100 of these. Originally priced at \$60, your's for only \$14.95! Bermuda Project. As a journalist, your plane is forced down on a Caribbean island. You must survive many perils, situations, and enemies to win this adventure. Excellent graphics and plot. Only 100 copies available. Originally \$40, your's for only \$8.95! Jug. As a Humanoid (aka Robot), Jug must descend into the core of a living planet to destroy a virus which is slowing killing the life forces it infects. Jug must not only find the virus, but also must survive the immune system of the planet... which thinks Jug is an invader! Neat plot, excellent play. Only 100 of these. Originally \$40. Your's for only \$8.95. GoldRunner II. Sequel to the overwhelming hit, GoldRunner, this version features a similar game play with much improved graphics, sound, and plot. Fast, fun joystick action! Only 30 of these. Originally \$40. Your's for only \$14.95. The Grail. Created with the TaleSpin graphic adventure writing software, Grail offers a neat plot with comic book-like graphics. The land of Kabar suffers from a deforming disease which can only be cured with the Holy Grail... approachable only by the pure of heart. Real, interactive characters in an entertaining plot. Only 75 of these. Originally \$30. Your's for only \$7.95.

250-721 ST The Grail 1 lb. \$7.95 -

Hard Drives, Floppies, and Back-Ups

Un-Beatable Supra44 Removable Cartridge Drive

Another Un-Beatable Hard Drive Deal!

REMOVABLE CARTRIDGE DRIVE... \$649.95

Completely Assembled, Guaranteed, Includes 44 Meg Cartridge

by Eden Brown

Our last attempt at reducing the cost of a 44 Meg Removable cartridge drive was to break it into components you could assemble yourself. We sold alot of these, but many people didn't like having to assemble them. Well, now we have a professionally manufactured and tested unit, guaranteed for a full year!

We've been working with Supra Corporation to combine their excellent host adaptor with onboard real time clock, case and power supply, boot software, and their volume buying power on Syquest 44 meg cartridge mechanisms to come up with a great savings offer. We call it the Supra44! You get everything you need including your first 44 meg cartridge! Buy additional cartridges directly from us for tremendous savings. For example, the complete set-up for 44 megs of storage is \$649.95. You add additional storage in 44 megabyte increments by simply buying more removable cartridges at our discount price of only \$74.95 each or 3 for \$209.95!

Please note: Our Supra44s come with one 44 meg removable cartridge that's pre-configured to auto-boot on all Atari ST and STE computers. The drives also have additional DMA and SCSI ports on the back, a battery backed up real time clock, and the Syquest firmware for ST compatibility already installed. All you do is plug it in, turn it on, insert the cartridge, and turn on your Atari ST!

The handsome case is color coordinated to match your Atari ST and the entire unit carries a full year's warranty. Again, the \$649.95 price includes one 44 meg cartridge and real time clock. Everything is completely assembled and configured... this is no home-built affair by you or anyone else. Sounds like a good deal, doesn't it? It's an unbeatable deal! Order your Supra44 today!

222-400 Supra44 Drive 12 lb. \$649.95

UNBEATABLE HARD DRIVE SALE... \$399.95

52 Megabyte, 11 Millisecond,... Assembled, Formatted,... Unbeatable!

by Eden Brown

Sometimes a window opens when a door slams shut. That's how we came upon this fantastic hard drive package/price. Atari Corp. discontinued their Megafire 30 just as our advertised Spring sale began... leaving us with no drives to ship to our customers. Many phone calls later, we struck a deal with Supra Corporation to manufacture a better and faster drive to sell instead. These new Supra 52s are completely assembled... not kits. They're even pre-formatted. All you do is plug them into your Atari ST/STE, turn on the computer, and the drive boots automatically.

Please note: Our Supra 52s are specially configured to auto-boot with ALL Atari ST and STE computers. They have additional DMA and SCSI ports on the back, a battery backed up real time clock, the works!

I say this sale is unbeatable because we can't even buy the parts for as low a price... \$399.95 for a completely assembled 52 megabyte 11ms harddrive? And not some junk drive either! The drive mechanism is made by Quantum and carries its own 2 year warranty. Supra warrants the rest of the unit for 1 year. How long we'll be able to get these drives so cheap is anybody's guess. If you want a top notch hard drive for your ST, this is the one to buy and there's no better time than now to do it. Pick up the phone, give us a call!

226-420 Supra 52 Hard Drive 6 lb. \$399.95!

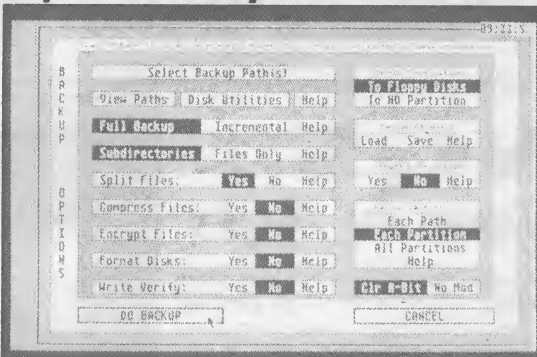

Un-Beatable Supra 52 Hard Drive Package

Back-Up to Floppies... \$29.95!

MAKE IT EASY TO KEEP REGULAR BACK-UPS... PROTECT DATA

There is an easier way to back-up hard drive data than just copying files from hard disk to floppy or having to back up the entire disk with crude back-up software: DiamondBack II is the most remarkable hard to floppy disk back-up software we've ever seen. No pre-formatting of diskettes! You just feed them into your drive and it formats as it backs up. No need to back-up files that haven't been changed. You can select specific files or folders to back up and leave the rest. It even works for disk partitions set up in MS-DOS and Macintosh formats! You can set your back-ups to be done in regular, split, compressed, and even encrypted (for security) file formats. Once you've set up particular back-up configuration, you can save it for easy loading the next time you back-up. Simple, powerful, and reliable... That's DiamondBack II.

424-201 Diamondback II 1 lb. \$29.95

EBCO/MASTER Floppy... \$129.95

High Quality DSDD 3.5 Drive w/TEAC Mechanism

Reliability and Compatibility are the most important requirements of an ST/STE floppy disk drive. Yet, they're not that easy to find. We went through three different aftermarket drives before we found one that works right. The first was a tan colored number that had a defect rate of around 50%. The second was a black unit that had a defect rate of maybe 40% but also wouldn't work with Spectre GCR. In both cases, the internal drive mechanism was an industry "cheapie".

Stay With TEAC Mechanisms

A few years back we sold an ST/PC floppy cable for building your own drive and found out pretty quick that TEAC drive mechanisms are the most compatible and reliable in the industry. Our EBCO/Master 35 has a genuine TEAC mechanism... Not Chinon, NEC, Fujitsu, or whatever. Genuine TEAC. Which means it works reliably with your ST and PC software as well as Spectre GCR! The EBCO/Master 35 runs super quiet, too.

Simple to Install

Our EBCO/Master 35 is double sided, double density (720K), and comes complete with drive cable and power supply. Plug it into the OUT port on your ST/STE computer and it works just like Atari brand floppy drives only for alot less money. 10 Day free trial. 1 year Warranty. Order your's today!

266-210 EBCO/Master 35 Floppy Drive 6 lb. \$129.95

Back-Up to Video Tape... \$49.95!

MORE CONVENIENT AND RELIABLE THEN FLOPPIES!

Let's face it: There is nothing more tedious than feeding floppies to back-up a hard drive. Now you can back-up your entire hard disk to continuous tape... Video Tape, that is!

Our new DVT cartridge provides all you need to connect your Atari ST/STE to a video tape recorder: Back-up software, cables, everything. All you do is insert a video tape cartridge, press RECORD, and walk away. The rate of back-up is about 20 megs/30 minutes. And, the capacity per video tape depends on the playing time of cartridge.

What alot of people don't know is that video tape is generally more reliable and consistent than floppy disk media. It's made that way because any errors are obviously visible on video mediums (TV Screens). Our DVT Back-Up system makes this even more reliable with built in error checking and correction.

Put it all together and you get a more convenient, reliable back-up system for your hard drive. And now, you can get this system for an extremely affordable price. Originally \$220, this is a powerful system on sale through E. Arthur Brown Company for only \$49.95! Order your's today!

211-310 DVT Back-Up 2 lb. \$49.95

New! ST BRUSH MOUSE

Our new ST Brush Mouse introduces a whole new way to manipulate graphics and data. It functions like a regular mouse... Meaning you hold it against your desk and move it to move the screen cursor. But, you hold it like you would a pen... or an artist's paintbrush. This is much more comfortable and familiar for drawing or graphic writing (ie. making a signature).

Our new ST Brush Mouse is no slouch as a regular mouse either. With a precision opto-mechanical ball mechanism, it attains the high resolution of 250 dots per inch (dpi) and a tracking speed of 500 mm/sec. The control buttons are mounted right under your fingers.

The ST Brush Mouse comes with a handy holder, instruction manual, and is compatible with any software that uses a mouse. The entire package is a value you just can't pass up!

If you can picture yourself performing mouse operations with a pen or pencil, you have a basic idea of how the ST Brush Mouse works. The picture shows you what it looks like. This is pretty new as I write and we have no pricing as yet. So, please call 612/762-8847 for price and availability.

LEMMINGS... MOST ORIGINAL GAME IN AGES

Mini Review by Eben Brown

The play of this game outshines any description I can come up with. But here it is in a nutshell: The Lemmings just mindlessly continue to move even where there are suicidal obstacles. You must coordinate the use of blockers to keep them from advancing while at the same time you construct bridges and tunnels for them to use. When you release the blockers, the Lemmings then flood forward through the safeways you've constructed. The whole thing gets complicated because you can't block forever and must allow them to move even as you continue to construct safe passageways. Further, your success at construction depends on your wise choice of particular Lemmings and skills to do the work.

The graphics are extraordinarily well done and the game itself is a fine example of addictive entertainment. Order your ST Lemmings game today! Requires color monitor and double sided disk drive.

280-922 ST LEMMINGS 1 lb. \$32.95

HILL STREET BLUES

No one has to tell you that Hill Street Blues was a good TV series. But now, you don't have to be satisfied with re-runs and memories. This new computer simulation creates a city within your computer that operates under the jurisdiction of your own Hill Street Precinct. You play the part of Captain Furillo and by deploying the Police Officers under your control, you solve and control the crime rate... which the computer generates. The game features nine of the most famous characters from the series and using these Police Officers, you can interact with up to nine crime incidents simultaneously... just like the mini-plots which all went on during each television episode.

Now's your chance to run the Hill Street Precinct and actually be a part of it all. Order Hill Street Blues today!

280-916 ST Hill Street Blues 1 lb.

STEREO CAD-3D 2.0... \$14.95!

Tom Hudson's Masterpiece... Includes Kimball's Cybermate

We found another overstocked warehouse of top rank Atari ST software and now you can buy the famous Cyber Studio CAD-3D 2.0 w/Cybermate for a fraction of its original cost! This is Tom Hudson's famous Stereo CAD-3D version 2.0 for creating three-dimensional objects and scenes from wireframed to solid modeling. It can even do shading from three adjustable light sources. Features include: True Stereo control with perspective adjuster; Dimensioning for real world object scaling; Camera View which includes zoom lens and variable perspective; Automatic Joiner for creating more complex objects; Spin and Extrude functions; Built-in 3D Primitives; DEGAS and NEO picture format; and more. The included Cybermate by Mark Kimball is used to create 3D animations and features a brilliant programming capability for transforming a 1 megabyte ST into a 10 megabyte frame buffer. Cybermate actually stores sequential frames for 3D objects in RAM and plays them back at speeds up to sixty frames per second... 2.5 times faster than any movie!

The package, Cyber Studio CAD 3-D 2.0 w/Cybermate is list priced at \$80. Order now from E. Arthur Brown Company at our unbelievable price of only \$14.95! (Requires 1 megabyte of RAM).

UN-BEATABLE SCANNER... \$199.95

Includes Latest Version Migraph Touch-Up Software

by Eben Brown

You may think I'm going off the deep end with these "Un-Beatable" sales, but some of the deals we've been able to swing have brought our sale prices far below what I believe any competitors are capable of! This latest is our EBCO/GI Handscanner. Originally \$399.95, this handscanner works at up to 400 dpi in line art thru photo modes with 64 levels of halftone/gray scale. It includes the latest version of Migraph Touch-Up software to both operate the scanner and edit your scans. This is a scanner that goes to work with a minimum of set-up.

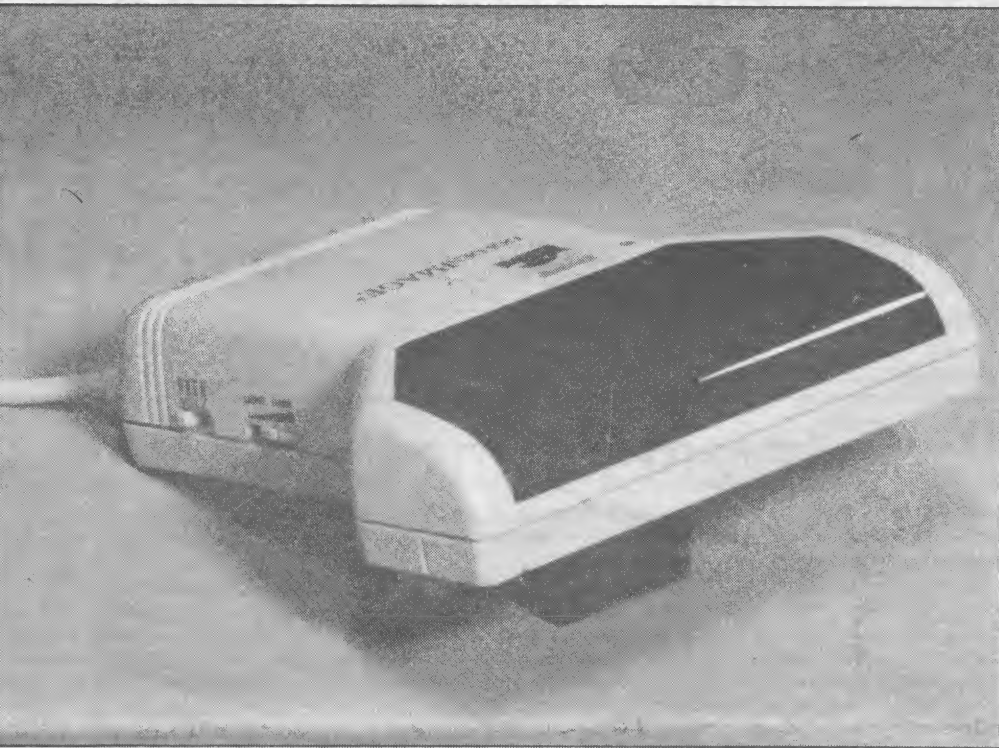

Plug it into your cartridge port, load the Touch-Up software, point and click the size of your scan and the resolution you desire, then drag the scanner across the photograph or clip art you want to capture. I use this scanner quite a bit, mostly for clip art. For example, the "B" logo on our front page was scanned from our stationary and imported into PageStream!

The low price on this scanner comes from a special volume buy-out and you may never see such a deal again. If you've been wanting a handscanner for your ST, now's the time to buy!

266-300 EBCO/GI Hand Scanner 6 lb. \$199.95

Scanned EABCO Logo

Supra Modems... \$89.95!

2400 Baud, Auto-Answer/Dial, Programmable Non-Volatile Memory

If you've been thinking of setting your Atari ST up for telecommunications, our Supra 2400 modem gives the best features at an absolutely unheard of bargain price! It even includes starter subscriptions to Compuserve, Genie, The Source, and other On-Line services.

The Supra 2400 plugs into your Atari ST/STE RS232 port (order cable separately). Then you connect it to your telephone jack and connect your telephone to the modem... that

way both can be plugged in at the same time. Then, you load a telecommunications program such as our new STalker 3.0 and On-Line Services, BBS's, or friends computers are a mere phone call away!

You lose nothing by saving money on our Supra 2400 sale. These are top quality modems with the same features as expensive modems. Full compatibility with industry "AT" commands; Asynchronous operation at 300, 1200, and 2400 baud; Compatibility with Bell telephone standards; Automatic answer/Automatic dial (tone or pulse); Programmable non-volatile memory stores telephone number and user configuration profile without DIP switches... there's even a full year warranty!

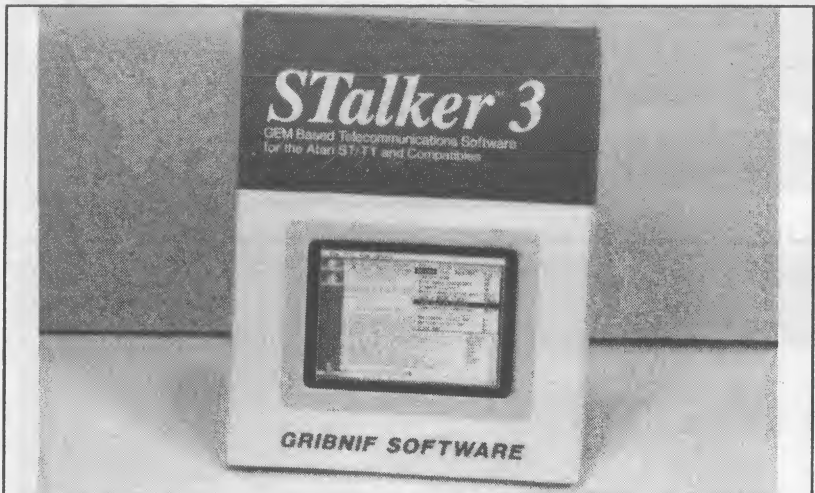

There is no better deal on a modem for your Atari ST. Order your Supra 2400 today!

280-740 Supra 2400 Modem 3 lb. \$89.95

275-405 RS232 Cable 1 lb. \$9.95

275-410 STalker 3.0 Software 1 lb. \$34.95

STalker 3.0 Modem Software

STalker 3.0 is the best, most complete, and easy to use modem/telecommunications software for your Atari ST/STE computer. It fully utilizes the easy, drop down menu, mouse click interface your ST is famous for. Yet, it has all the power and capability to satisfy the most demanding users. And get this, you can use STalker by itself or from within other programs as an accessory!

For terminal emulation, STalker 3.0 can do VT52, VT100, and PC-ANSI. It can handle ASCII, XModem, XModem 1K, YModem, YModem/G, and ZModem file transfers. The Auto Dialer can store up to 30 numbers. There are 20 user definable function keys, a cut and paste clip board, GDOS support for different terminal fonts, Virtual screen size,... everything you'd want in a modem/telecommunications package.

An additional capability which comes with STalker is BackTALK Script Language. It's a special language that lets you customize and program STalker 3.0 to perform any function you want. Complex operations can be easily automated.

If you're using a modem now, STalker 3.0 is a great way to upgrade your system. If you're purchasing a modem, this is the right software to get started with... the latest and the greatest at a terrific savings. Order STalker 3.0 today!

275-410 STalker 3.0 1 lb. \$34.95

IMG SCANNER... Only \$49.95!

Gives Up to 1000 DPI... Half Priced!

The IMG Scanner is an economical way for you to capture pictures, photos, line art, etc. Simply plug the IMG cartridge into your Atari ST/STE cartridge port and mount the fiber optic cables to your print head. Then, feed a picture or drawing through the printer like a piece of paper. Your IMG Scanner automatically sets the right amount of contrast and then proceeds to scan your picture into your computer. You can select the degree of resolution from 75, 150, 216, 300, 360 to 1000 dots per inch. And, your IMG Scanner will record 256 gray levels!

Here's how it works: The IMG Scanner software sends codes to your printer telling it to move the print head back and forth and advance the paper at tiny increments. Then, the IMG Scanner sensor records a tiny increment of your picture with each head pass. Scans can take several minutes to complete depending upon the resolution you select and your printer's speed. Once scanned, an image can be saved in .IMG, .DEGAS, or .NEO formats for import into your favorite DTP or graphic software.

One of the neat features of the IMG Scanner software is the ability to re-constitute and existing scan with a different level of brightness. Will it work with your printer? The software includes drivers for Epson, Panasonic, Citizen, Cihoh, Star, Atari, and any printers compatible with these. In addition, the drivers are custom configurable.

The IMG Scanner retails for \$100. We made a special volume purchase deal to bring this to you at half price... only \$49.95! Don't pass up this opportunity to own an excellent piece of equipment!

211-210 IMG Scanner 2 lb. \$49.95!

Powerful Word Processor... \$14.95

Regent Word II does everything you need it to do. On screen you can see italics, bold, underlined text, subscripts and superscripts, etc. Files can be saved directly as ASCII or Regent Word II documents... meaning you have no trouble using Regent Word II documents in your desktop publishing program. A Word Count feature is really nice for keeping track of articles or school papers that must be a certain length. Headers and Footers are fully supported. A handy feature you will like is a built in Calculator. Search and Replace is also nice on Regent Word II. Of course, it has full support for adjustable margins, tabs, spacing, etc. And when you get done, just click on the spell checker to proof read your document. The Spell Checker will check against its dictionary. If your document contains a word it doesn't recognize, it'll show a list of similarly spelled words. You select the properly spelled one and go on. If your word is spelled right but not in the dictionary, you can easily add it with a simple mouse click.

This Regent Word II Collegiate version has to be one of the best deals we've ever offered. As a special bonus, we've included a double column printing utility. Don't wait, order Regent Word II Collegiate today!

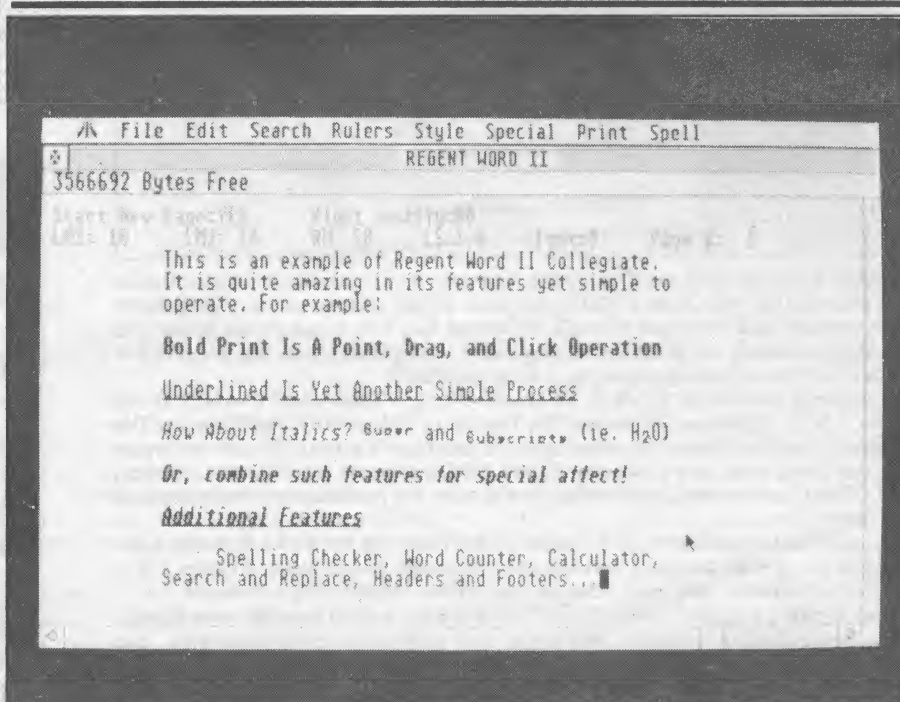

510-130 Regent Word II Collegiate 2 lb. Only \$14.95

Desktop Paint for Publishers

Our new DTPaint is a full function high resolution paint program that operates as a desk accessory. You can access it from inside any application just like any other accessory. This means you can create and edit .IMG, .DEGAS, and MacPaint files from within PageStream, Calamus, WordUp, Wordflair, and other programs... what a time saver!

DTPaint is a full featured paint program with all sorts of brush styles, fill patterns, drawing tools, fonts, etc. It even has the famous Lasso and Jack Knife type tools familiar to Macintosh MacPaint users. You give up nothing with DTPaint... it is just a whole lot more convenient to use since it operates as a desk accessory from within any program! DTPaint is compatible with all Atari ST/STE/ and TT computers. Order your's today!

443-212 ST DTPaint 1 lb. Our Price Only \$39.95!

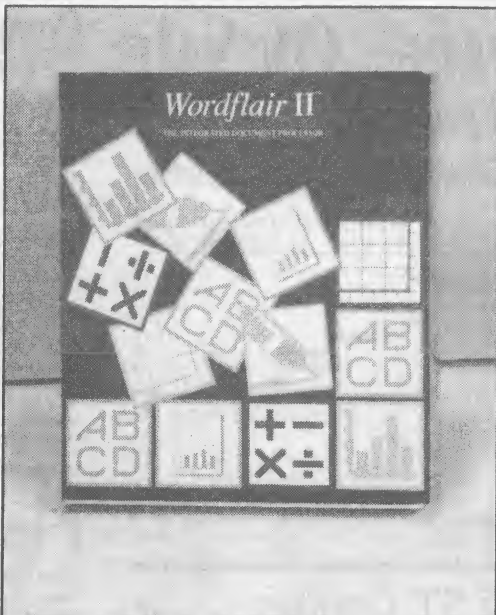

Writing and Publishing

WordFlair II WYSIWYG Word Processor

Wordflair II brings a whole different meaning to word processing. Certainly you can write letters and documents with it. Certainly it gives you the immensely popular point and click, drop down menus, user interface and all sorts of font sizes and styles. And, it imports the popular .GEM and .IMG graphic/picture files. And now this new Wordflair II version even includes a spell checker dictionary and thesaurus! It certainly isn't wanting for any desirable word processing feature! But, the really unique part of Wordflair II is this: Wordflair II has "Calc Regions"... areas of documents that perform sophisticated calculations. Add to this "Graph Regions" which can be linked to the Calc Regions and you have an amazing package.

This Calc/Graph Region feature allows you to mail merge Wordflair II documents with data bases that go beyond simple name and address files. Now you can have numerical data which is calculated, analyzed, and presented in custom graphic format for each name and address! These regions can be used for creating intelligent "boilerplate" and even invoices that do sums and totals.

Wordflair II is an amazing piece of software for all of your writing applications. It'll import and export ASCII text format... handy for integration with Desktop Publishing software such as PageStream. It includes on-line "help" screens to assist your ease of use. On screen What You See Is What You Get... and you can view full pages to see how things are lining up. There's

even a "Pen" capability so you can draw rules, bars, and arrows.

You will need at least 1 megabyte of RAM in your ST/STE to use Wordflair II. A monochrome monitor and hard drive are highly recommended as well. Experience amazing word processing... Order Wordflair II today. Remember, our low low price is for the very latest Wordflair II version!

280-760 ST Wordflair II 3 lb.

Grammar and Style

Now your ST can have the same Grammar and Style checking power as other computers. Imagine having your Atari ST/STE proof read what you write and check for errors in grammar! Anyone who reads your work will be impressed at your mastery of the written word... And you can spend more of your creative power on content rather than mechanics.

Our new GramSlam software can install as an accessory or will run on its own. It will analyze the text from all word processors and text editors checking for over 1200 common grammar and writing style problems. It has a built-in problem phrase editor, writing style and readability statistics, and runs on all ST/STE computers in color or monochrome.

If you use your Atari ST/STE to write, and you're serious about your work, grammar and style checking is a must. Order ST GramSlam today!

280-630 ST GramSlam 1 lb. \$29.95

Word Perfect for Atari ST

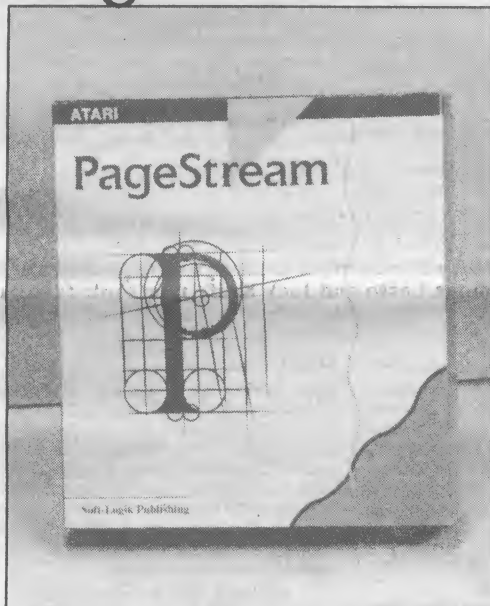

Word Perfect on PC Compatibles is a worldwide best selling word processor. Now a version is available for the Atari ST with the same features only enhanced for the easy to use Atari ST point and click user interface. If you like Word Perfect on a PC, you'll LOVE it on an Atari ST!

The main advantages of ST Word Perfect are: Multiple column capabilities, automatically numbered footnotes and endnotes, a 115,000 word expandable spelling checker, a 10,000 word thesaurus, advanced Mail-Merge feature, and support for over 190 printers. Other attractive features include: Automatic hyphenation, macros, search and replace, and super/subscripts. It is a first class word Processor with right, left, or center justification, headers and footers, automatic page numbering, date format/insert, left and right indents and more.

Everything looks and works best on an Atari ST! Note: Our super low price is for the very latest version of ST WordPerfect... Order yours today!

PageStream Publishing Software

Review by Eben Brown

Our PageStream II Desktop Publishing software for Atari ST/STE computers comes with 8 Scalable Outline Fonts and 10 Compugraphic fonts. It's compatible with standard Postscript fonts, too. We even have a special deal on collections of additional fonts. These fonts can be set for any size between .01 of a point to 183,000 points in .01 point increments. All fonts are scalable to printer and screen for super smooth viewing as well as print output. Print directly to your dot matrix printer, Atari Laser Printers, HP LaserJet and Postscript compatible printers. Or, output a postscript file to disk and send it to any Linotron imaging service for 2500+ dpi phototypesetting.

PageStream II will create text itself or you can import from your favorite word processor. Even import standard text from other computers. Import graphics and clip art in standard .IMG, .IFF, .DEGAS, .NEO, .GIF, .TNY, .TIFF, MacPaint, Aegis Draw, IFF ILBM, EPSF and Mac and IBM EPS formats. Flow your text around it. View your work at any magnification from 15 to 1500%. Draw lines, boxes, circles, or other shapes. Use 40 special fill patterns to be creative. 10,000 grays. Stretch, twist, rotate, or slant text to fit your situation. Print in color (Pantone compatible) or do color separations. Print negatives. Use inexpensive PageStream fonts or PC/Mac industry standard fonts. Best of all, PageStream is Easy To Learn... very intuitive and natural.

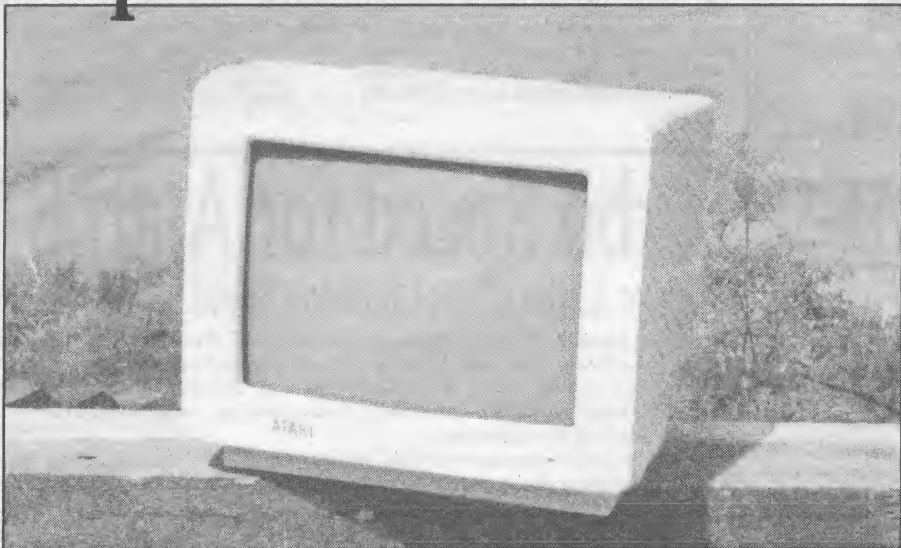

The catalog you're reading was created with PageStream on an Atari ST and printed with an Atari Laser Printer. Why pay more on some other computer when Atari ST/STEs can do so much for so little money? PageStream II requires at least 1 megabyte of memory. A hard drive is recommended, but you can get by with two floppy drives.

280-413 ST/STE PageStream II 4 lb.

Paper White Monitors

When buying a monitor for Desktop Publishing or Word Processing, the most important thing is high resolution. The second most important is a screen that portrays what your finished documents will look like. The Atari SM124 delivers on both counts. Being 640X400 dots per inch resolution, it pictures your work clearly, with no "flicker". Being black-on-white, it looks just like your printed document will look on white paper.

This is a working monitor... not for playing games. You can stare at it all day without getting a headache. We use them almost exclusively in our offices at E. Arthur Brown Company. No additional controller boards or cables to buy. This monitor comes ready to plug into your Atari ST or STE. Order your SM124 to see what wonders can be worked on your Atari ST/STE computer.

226-300 SM124 B/W Monitor 20 lb.

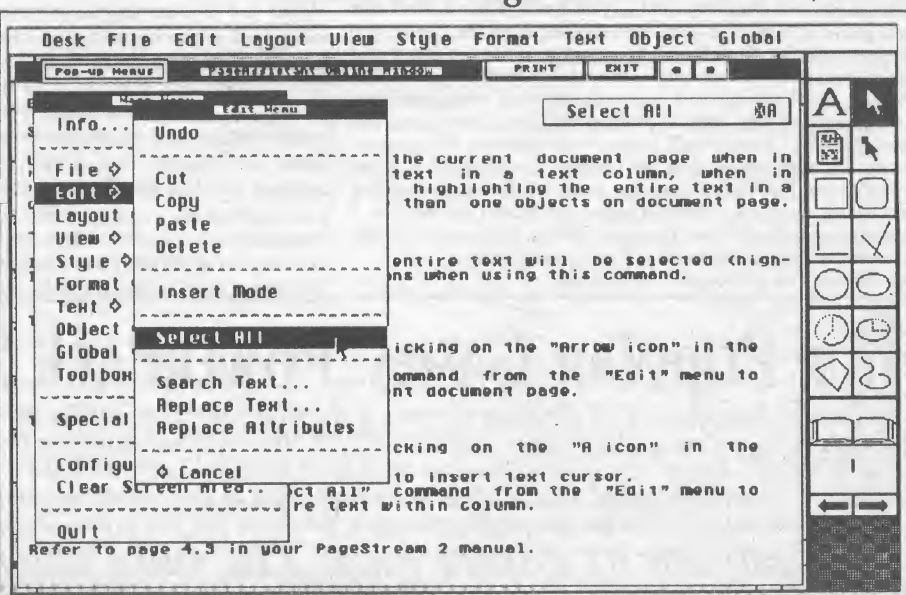

Special DTP Price \$159.95

Our new PageAssistant software is a combination On-Screen help, tutorial, and reference for PageStream 2.1 users. It runs on top of the PageStream 2.1 software and provides rapid menu access to explanations for what commands do. These explanations also include page references to correlate with your PageStream 2.1 manual... so you can find what you need to know fast. It's easy and comfortable to use, too. Using the GEM pop-up overlapping menu capabilities of your ST, PageAssistant combines text, icons, and pictures to illustrate, explain, and give tips on commands step by step.

PageAssistant comes with a 52 page manual that includes tutorials on mastering the macro command, how to design textual and graphic effects (such as rotating objects in a circle, placing text on a path, etc.), page layout techniques, and much more.

Need something to sweeten the pot? Okay! We'll throw in a free PostScript Type 1 font with your order. Get the most out of your PageStream 2.1 software with PageAssistant. Order today!

Talking Educational Software Only \$19.95!

Invest In Education

Review by Eben Brown

These original \$50 programs are now available to Atari ST owners for an unheard of price! *ST Smooth Talker*, the original type-it-speak-it speech synthesizer is so easy to use. Feed it text from word processors, data bases, spread sheets, etc. Then let *Smooth Talker* proof read your work. Or, type directly into the program. It's amazing, entertaining, and educational to hear your ST translate your written word into speech! *ST MathTalk* is a computer math tutor that talks! Customize your own addition, subtraction, multiplication, and division

lessons. Then watch your children streak to the head of the class thanks to the vocal tutoring of your Atari ST. *ST Speller Bee* is yet another customizable talking tutor. Type in your children's weekly spelling lists. Then let your ST drill them vocally. *ST KidTalk* is a talking word processor for children. It teaches writing skills by letting young writers actually hear what they've written... in a male or female voice no less! *ST MathTalk Fractions* is a customizable talking tutor for learning fractions, decimals, and percents.

All children love to go to the computer lab at school. But, they're usually using old fashioned software with old fashioned Apple II computers. As long as you have that Atari ST, why not take advantage of this terrific bargain on state-of-the-art educational software... that actually TALKS! Order today!

AWESOME... NEW SPACE/GRAPHIC GAME

Mini-Review by Eben Brown

Having intercepted a transmission that revealed a Homikahn plot to zap the Octarian planetary system into oblivion, you very little time to get clear before the holocaust. Your need for tons of fuel with which to escape starts you off on a planet hopping adventure of space trading and pirate-fighting booty plunder.

Awesome is a terrific combination of shoot-'em-up action and trading strategies. Featuring innovative hyperspace sections, full screen aliens, and a whole galaxy to explore, it is a game you will enjoy immensely. Graphics are superb. Color monitor required.

280-921 ST Awesome 1 lb. \$29.95

HARD DRIVE ACCELERATOR KIT

Review by Eben Brown

Our new *Hard Disk Turbo Kit* is just what the doctor ordered for maximizing the potential of a hard disk on your Atari ST. First a little background: Hard disks are cons faster than floppies... we all know that. But, sometimes their capacity gets in the way of access speed. The more you use your hard drive the more dispersed become the bits and pieces of your files. Pretty soon your drive is having to do alot of searching to find things. Well, part of our "Turbo" process is a program called *TOOLKIT* that rewrites your hard disk files into contiguous blocks. In other words, they're all in one place for quick and easy access... meaning your hard drive actually works faster.

As fast as your hard drive is, it still can't beat the speed of RAM access. So, how can

you apply RAM speed to Hard Drive access? Part of our "Turbo" process is a program called *M-CACHE*. It actually holds recently accessed sectors of your hard drive in RAM... eliminating the physical disk search process entirely. The result is even more speedy access to your files!

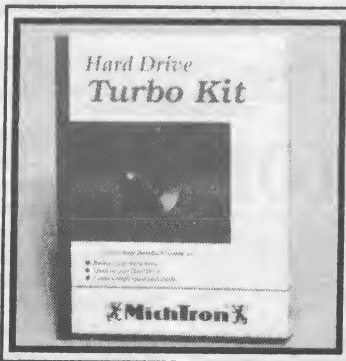

Finally, you need a way to back up your hard drive in case of some data losing disaster. The "Turbo" process includes a *BACK-UP!* utility which quickly duplicates your hard disk files onto a series of floppy disks.

The *ST Hard Disk Turbo Kit* is a MUST purchase for anybody with an Atari ST and a hard drive. Order your's today!

Populous II... "PowerMonger" Color For Your Vidi-ST

The makers of Populous bring you back to earth with this latest game of You-Are-God: PowerMonger. In this game, you compete against other PowerMongers to unite the lands and consolidate your power before they do. You can spy on your enemies, form alliances of convenience, deal with good, bad and ugly influences, plan sophisticated battle strategies, and more. The 3-D game board shows communities, landscapes, and people with names, jobs, and homes. Game controls allow you to rotate the world, zoom in to check action, bribe, and send troops to attack. PowerMonger has Real-Time battles, 3 computer opponents, over 30 sound effects, Billions of worlds, and even supports modem play. Order your's today!

280-262 ST PowerMonger 1 lb. \$44.95

Vidi-ST video digitizer owners (Vidi is described elsewhere in this catalog) can now digitize video pictures in full color. Our new Vidi-Chrome lets standard STs handle up to 512 colors and 1040STEs up to 4096 colors. You simply point and snapshot your subject three times through the red, green, and blue filters supplied and like magic an amazing color picture will appear on your screen. Vidi-Chrome is compatible with any video camera, black and white or color. Order your's today.

280-260 Vidi-Chrome ST 1 lb. \$39.95

FOUR POPULAR GAMES... POWERPACK \$39.95

Our latest compendium, ST PowerPack has four of the most popular games for the ST. TV Sports Football has been a top seller in its own right for \$32.95. Bloodwych continues to be one of our top sellers at \$29.95. Xenon 2 MegaBlast is also a great hit at its normal price of \$32.95. Lombard Rac Rally is one I haven't heard of... but it is highly recommended as an accurate, exciting recreation of the world famous rally. You get all four of these great games for one low price... Order today!

280-261 ST Power Pack 1 lb. Only \$39.95

Computerize Your Family Tree...

ST Genealogy Software

For Personal, Professional, or Religious Applications

Our new *Generation Gap Plus* software turns your Atari ST into an awesome Genealogy machine. A full blown commercial program, *Generation Gap Plus* has easy to use menu and function key operation. It prints family group sheets, pedigree charts, name lists, and more. Each record can have unlimited note fields. Family members are linked automatically. Latter-Day-Saints (mormon) ordinance data is fully supported. You can print to any printer including the Atari Laser, HP Laser/desktop, and more. Monochrome and color Atari work

equally well. *Generation Gap Plus* requires 1 megabyte of memory and a double sided drive. It'll manage up to 2 billion records, give an on-screen pedigree chart, burial dates and places for children on family group sheets and much more. If you have an interest or desire to study genealogy or even just to trace your own family's roots, this is the computer program to buy. Order *Generation Gap Plus* today!

567-200 ST Gen Gap Plus 1 lb.

Our Price Only \$39.95

FINDEX V DATA STORAGE

First there were the "Flat Field" programs. They served well enough for name and address type data. But, they took alot of foresight to set up (ie. setting up the right number of fields with just the right number of characters per field) and were difficult to change or interact with. Then came the "Relational" programs. These are much more flexible, but also more complicated. In fact, they're closer to being a programming language than a ready made application... much more figuring than most people want to do.

FINDEX V is something completely different. It's so easy to set up, you can be entering data within 5 minutes of opening the package. Yet, it offers speed and flexibility unmatched by Flat Field OR Relational systems. The creator of *FINDEX V*, Thomas B. Woods has approached information management from a totally different perspective. For want of a better term, we're calling it Multiple Keyword Logic (MKL).

The principle of MKL (and *FINDEX V*) is that computers should access and manage information like people do. For example: With no conscious set-up procedures, the human brain handles information in an unformatted, disjointed, UNLIMITED manner. Yet with the simplest reference, it is able to find, link, and organize the information it needs in an instant. *FINDEX V* was designed to operate in this very same way.

You can enter unorganized text into it, or organized information (such as a mailing list), or records with some organized and some unorganized information... such as notes and memos. *FINDEX V* accepts whatever you want to put into it. When you want to find your information, just type a word or phrase to look for. In 2-8 seconds, your record pops onto your screen. Record size is essentially unlimited. Find anything from a name and address to a Bible verse... that simple... that fast. When you fill up a 60 line "page", just start a NEW page... like you would with a notebook or diary.

Un-Organized and Organized...

All At Once

If you've gotten the impression that *FINDEX V* can manage information in totally un-organized formats, you're right. It can also be super organized or it can be partially organized and partially unorganized. For example, you might set up records so that each one has the same types of information occurring on the same lines in each record. Name on line 1. Address on line 2... and so on. This type of uniformity allows for sorting and defined output capabilities when they're needed for data merging, report generating, and form letters. Probably the more common arrangement for *FINDEX V* users is to maintain records that are a combination of formatted and unformatted data. A typical paper rolodex card has a name and address. But who among us hasn't jotted a few notes and

memos on their rolodex cards? That's where *FINDEX V* comes in. Pull up a name and address, see your notes on what your last communication or sale was about. Make a new contact and type some more details onto the record.

Another amazing utility of *FINDEX V* is that many different types of records can be in the same file: Your daily appointment diary, your address file, your "things to do" list... if certain things go together, you can put a keyword into them so they'll separate from other entries when you want them to. Having them all available at once is really handy though. 2-8 seconds is all it takes to find something!

File Compatibility

Will you be able to use your existing data in *FINDEX V* without manually keying it in? YES! Will *FINDEX V* data be compatible with other systems if you want to exchange information with somebody that doesn't use *FINDEX V*? YES! *FINDEX V* supports ASCII(text), flat field, and delimited file formats. In fact, the ease of importing and exporting these formats when combined with the ability to re-arrange files with a special FORM command make *FINDEX V* the preferred system for people who must maintain several compatibilities.

There's Much Much More!

This review covers most of the major features, but *FINDEX V* has many more. TOKENs can be defined for single key entry of entire strings of text. Sophisticated reports and form letters can be generated using the FORM command. *FINDEX V* is compatible with text files from any word processor... or it can generate text itself for writing notes and letters. A special Nth Name Select allows for statistical sampling of your records. STATS and TALLYs allow for numeric analysis of data. Formatted Data Entry allows you to "fill in the blanks" of custom designed forms. A special DOS batch file feature allows you to exit to and perform DOS functions (PC version), then return to where you were in *FINDEX V*. No copy protection... install on your hard or floppy drives with no hassle.

Money Back Guarantee

Who ever heard of a money back guarantee on software? *FINDEX V* carries a 30 day money back guarantee. You can try it for 30 days and if you're not perfectly satisfied, you can return it for a refund (less shipping charges). I must say that VERY FEW have taken us up on this guarantee... most people fall in love with *FINDEX V*!

The Pitch

FINDEX V works like your brain. It's easy, natural, and FAST. It's MKL technology can be applied to your new or existing data with ease. And, if all of that doesn't make you happy, YOU CAN SEND IT BACK FOR A REFUND! What have you got to lose? Order *FINDEX V* today!

Turbo Speed for Atari ST

Software Blitter Gives Lightning Speed... Only \$29.95!

Our latest version *Turbo ST* makes your Atari ST fly! Watch as windows update in a flash from the desktop. Scroll through your favorite word processor in almost "Zero Wait State". It's all accomplished easily and affordably with *Turbo ST* software... no expensive, complicated circuitry wiring... just load the software!

Ever since Atari announced the "Blitter Chip", ST owners have been anxiously awaiting the opportunity to speed up their machines. From the start, *Turbo ST* has been faster than the actual Blitter Chip. But this latest version is even faster! And even more compatible with other programs.

How well does it work? Most notably, you'll be amazed at how fast your GEM windows will be updated. Instead of watching as each window gets drawn and filled with its directory, you see an almost instantaneous update. It's almost startling at first. Click your mouse button and the window is updated. As far as running programs goes, text based word processors will fly... WordPerfect, WordWriter, etc. Any program that uses the GEM system for screen display will do it faster with *Turbo ST*. Programs which have their own speed up system won't give quite as dramatic results. For example, PageStream doesn't seem to be helped much. On the other hand, DEVPAK text editor runs 450% faster and so do many other programs!

Turbo ST is the simple, inexpensive and FASTER answer to your desire for speed. Order today!

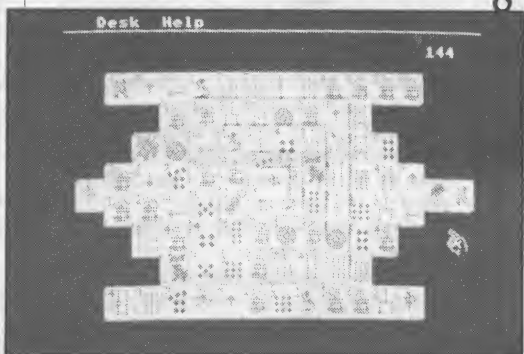

717-700 Turbo ST (Latest Version) 1 lb. \$29.95

Games, Diversions, & Knowledge

MAH-JONG COMES TO THE ST Popular Chinese Tile Solitaire... It's Addicting!

Mini-Review by Eben Brown

Here's a game I knew you'd need to see a screen photo of. As you can see, it's not the kind of "solitaire" you play with traditional playing cards. It's Mah-Jong Solitaire, it's been taking the rest of the personal computer world by a storm, and now... You can play it on your Atari ST/STE! The object of Mah-Jong Solitaire is to remove matching pairs of tiles from a three dimensional stack. They must be removed to the right or left and only if there isn't another block in the way on the same level. It's actually an easy game to understand but very challenging (and addicting) to play!

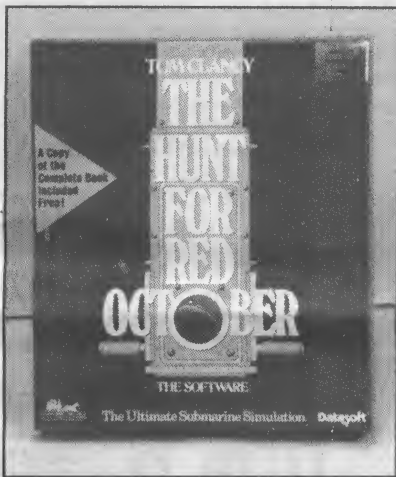

There is a handy "Suggest Move" feature for the times when you get stuck... this I found extremely useful. Also, you can "Show Removed Tiles". A "Select Layout" lets you change the game to a completely different layout anytime.

Mah-Jong Solitaire runs on any Atari ST or STE but requires a color monitor. Order yours today!

523-600 ST Mah-Jong Solitaire 1 lb. \$24.95

Hunt Red October... Only \$19.95!

Includes Sub Simulator AND FREE HRO NOVEL!

The Hunt for Red October: Best seller suspense novel; Block Buster Movie; And now you can have the top selling computer sub simulator at fantastic savings! This is the genuine, original Hunt for Red October... ultimate submarine simulator and adventure game... at less than half price! And it even includes a copy of Tom Clancy's original 469 page novel!

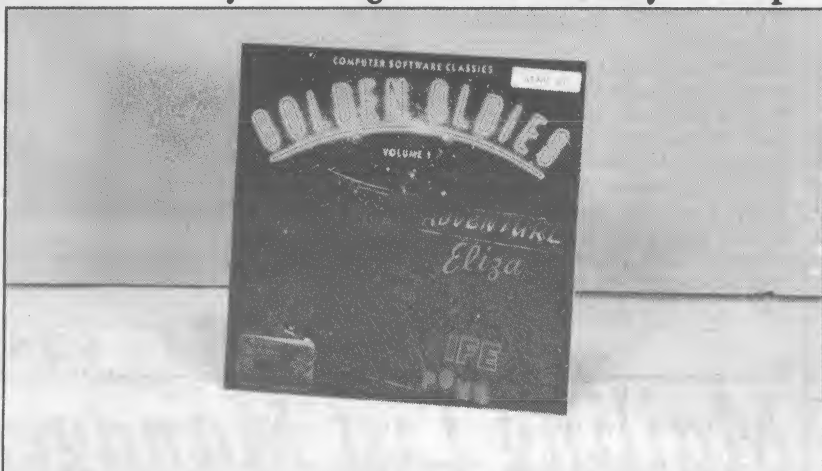

Red October is the latest Soviet nuclear submarine featuring a silent caterpillar drive... making it undetectable and extremely dangerous to American security. You are Commander Ramius, commander of the Red October and, you are defecting to the west with a plan to give your sub to the U.S. But, the U.S. doesn't know your intentions and worries that you are a threat. The Soviets are trying to stop you in any way possible. Everyone knows you are out there.. somewhere and you have to navigate, maneuver, and fight for your life!

We made a great deal on this terrific, premier submarine simulator so that you can order it at less than half of retail (suggested retail is \$50)... only \$19.95. Order today!

525-400 ST Hunt for Red October 1 lb. \$19.95

CODE FROM THE PAST... \$9.95

Uncut History Making Games, Literary Excerpts

Mini-Review by Eben Brown

For many of us, the personal computer experience is only about 10 years old. But the games, companies, and individual design philosophies for much of what we see to day had some very humble but magnificent beginnings. This new Golden Oldies package is really neat in that it includes fully functioning, uncut originals of the first games invented for computers. In addition, it has a booklet that explains alot of what was going on during those times through literary excerpts by various authors.

Game-wise, you get the original Adventure game by Will Crowther and Don Woods... the original that started the adventure game genre. You also get Eliza, the 1965 creation of M.I.T. Professor Joseph Weizenbaum. This is the original artificial intelligence program that simulates a conversation with a psychiatrist. Also included is LIFE the 1970 creation of mathematician John Horton Conway. LIFE was described as both a game and a video art form... "A Window Onto an Alternative Universe". And finally, you get an original copy of the 1972 block-buster, "PONG". Created by Al Alcorn for Nolan Bushnell's fledgling "Atari" company, PONG is the original ping-pong computer game that launched the video arcade, and home video game industries... not to mention the computer arcade game industry and the Atari Corporation!

All of these games have of course been configured to work on your Atari ST, but otherwise they operate exactly like the originals. Really a neat set of software to add to your library!

280-635 Golden Oldies 1 lb. \$9.95

Cinemaware Collector's Library... \$24.95! Five Superb 3-D Adventures... An Over \$200 Value!

Mini-Review by Eben Brown

For those unacquainted with Cinemaware, they are a revolutionary genre of adventure games designed to look and play like interactive movies. The full color graphics are three dimensional and very realistic. The plots are also realistic, not kiddie fare. Playing a Cinemaware adventure is like reading an intense novel, only you are part of the story!

We came across a small quantity of the most popular Cinemaware titles... I don't think the owner knew what they were worth. Anyway, we bought them and can now offer them to our Atari ST customers as a complete library... all for a ridiculously low price! Please note that this is not a one

package compendium. You don't get one good title and 4 you never heard of. Purchased elsewhere, these titles would cost you as much as \$200... maybe more. Individually packaged, these are the originals, these are the best... These are genuine Cinemaware you can buy for a song!

S.D.I.

Two star-crossed lovers hold the key to the survival of the human race: He is a young General commanding America's Strategic Defense Initiative (SDI); She is a beautiful Russian Commander caught in the crossfire of a KGB coup d'etat in the Soviet Union. Can the American save her? Can the two of them save the human race?

Experience gut wrenching tension as you defend against KGB missile attack with advanced particle beam weapons. Battle KGB rocket fighters in your 3-D flight simulator. Repair SDI satellites and dock with U.S. and Soviet space stations. It's all very realistic and very involving. All of this with a romantic love story intertwined!

Defender of the Crown

The age of chivalry! A time of lusty wenches and black hearted villains. King Richard has been murdered and England thrown into civil war! Amidst the ringing clash of steel and the thunder of charging steeds the bold Saxon knights have chosen you to lead them into battle against the hated Normans. Should you succeed, you'll win the Crown of England and the love of many a beautiful damsel!

Know heart pounding action as you rescue your lady from a Norman dungeon. Joust for fame, fortune and land in majestic tournaments. Participate in heroic battles featuring castles being smashed by catapult barrage. All of this in a unique blend of role playing and strategy combined with arcade style sequences.

King of Chicago

Chicago in the 30's. Prohibition. Power struggles and rampant crime. Only the toughest of the tough survive. Capone used to call the shots, but he's up the river and Chicago is up for grabs. Violence, intimidation, bribery, treachery and clout are your weapons as you battle the forces of the legendary Capone mob for control of the Windy City.

Over two years in development, King of Chicago features incredible, animated, 3-D graphics, easy controls... no typing. Enhanced sound effects and original music, this really is the epitome of Cinemaware.

Total Eclipse

An impending eclipse of the sun is about to trigger an ancient Egyptian curse. The earth will be annihilated unless you, racing against time, can locate and destroy a mysterious, secret shrine. Alone in a vast Egyptian pyramid, you face a chamber of horrors beyond your wildest dreams as you roam blindly amidst the mystic ruins.

Avoid poison darts, booby traps, mummies, deadly spiders, and other fatal surprises in your search. Confront and overcome obstacles which no human has faced in over 4000 years!

Total Eclipse is an early Cinemaware product whose graphics are programmed in Freespace... a solid 3-D scrolling graphics which advanced the game world in 1988. While these graphics are not as advanced as other Cinemaware, the game itself has incredible depth and complexity.

Dark Side

An alien race seeks the final destruction of humanity. Their awesome doomsday device, the Zeph One, is programmed for the assault and only moments remain before mankind's last outpost gets blown to bits. Transformed into a mercenary of the future, you become a one man army dedicated to saving the world. Armed with lasers, shields, and a jet power pack, you must destroy the Zeph One before it can attack.

Dark Side is a fascinating combination of exploration and puzzle solving. Tricks and traps abound, you'll have alot to figure out to master this game!

Another early Cinemaware adventure, Dark side features the Freespace solid 3-D graphics which advanced the adventure game world in 1988.

Limited Quantities... Order Today!

As of this writing, we only have 128 of these Cinemaware Five Game Collectors's Libraries. If you want one or plan to get one, don't hesitate. These kinds of sales are often sold out before our catalogs even reach all of our customers. Order Today!

EAB-LIB Cinemaware Library 3 lb. \$24.95

Mavis B. Typing... Only \$27.95

Let Your ST Teach You Touch Typing!

There never has been a more perfect typing tutor than Mavis Beacon Teaches Typing. We've sold bunches of them and now can offer the program for an even lower price! If you've been holding off or procrastinating on buying a Mavis Beacon typing tutor, now is the time to make your purchase!

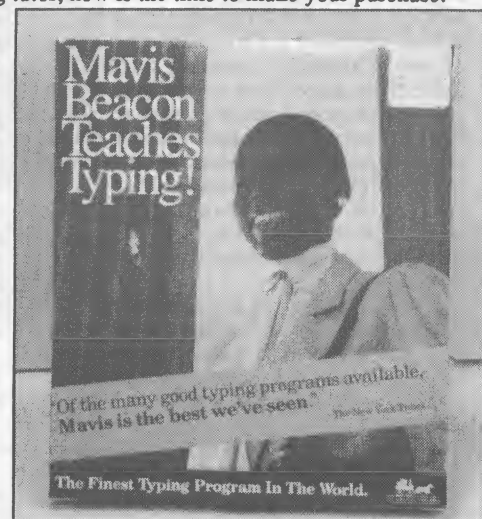

The secret to why Mavis Beacon works is in its artificial intelligence. It literally checks and keeps track of your typing progress lesson by lesson and tailors your instruction to your individual needs. This, combined with proven methods for teaching typing (not just plunking out "asddffa"), puts Mavis B. into a class all by itself.

In addition, Mavis B. makes your learning fun and interesting. It creates customized practice exercises. It selects quotes from great writings, riddles, rymes, and jokes. It uses facts from Guinness Book of Records. And, it presents your lessons graphically on screen. an especially neat feature is how speed drills are depicted on the screen as if you were driving a race car!

Why not get this terrific typing tutor and save a bunch of money? Suggested retail is \$50 but our price is only \$27.95... Order today!

Atari ST/STE 3-Book Library

Mini-Review by Eben Brown

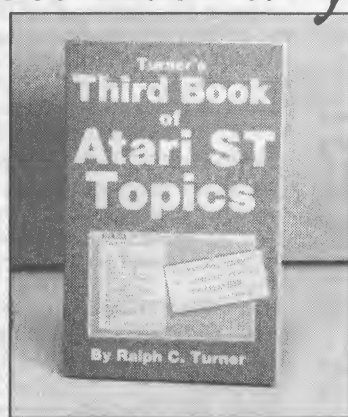

It's no secret that Atari ST/STEs come with minimal instruction manuals. That's why Ralph Turner began this series of books on the Ins and Outs everyone needs to know. These books will give you the background knowledge of a seasoned ST owner in no time at all... and they're lots of fun to read! You can buy them individually, but we put a special low price on them if you buy the complete set all at once. Why beat your head against a wall trying to learn this stuff on your own? Order our ST 3-Book Library today!

The Atari ST Book

This book will explain all of the most confusing New User subjects: RAM disks, the Item Selector, DESKTOP.INF, Accessories, Printers, Word Processors, File Management, AUTO Folder, Control Panel, Modems, Public Domain software, and much more. It's an all around education in the Atari ST that gives far more savvy than your ST operating manual!

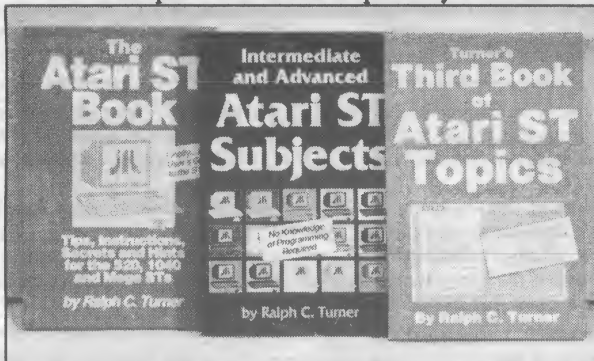

Intermediate & Advanced Atari ST Subjects

This book goes even deeper than the previous Atari ST Subjects: Hard Disk management and optimization, ASCII files, Assembling your own hard drive, Connecting 5.25" Floppy Drives, and much more. It's sort of an update as well as a deeper study into Atari ST operations.

Turner's Third Book of Atari ST Topics

This latest book introduces a whole slew of new subjects and provides plenty of information to satisfy your hunger. It covers the whole family of ST/STE computers including the fabled TT030. There's an introduction to MIDI (your music ports), Laser Printers, Compuserve and Genie, Database transfer techniques, new PD and Shareware, Telecommunications, Null modems, Modems in general, TOS upgrading, BBSs, and lots of miscellaneous information. Order your's today!

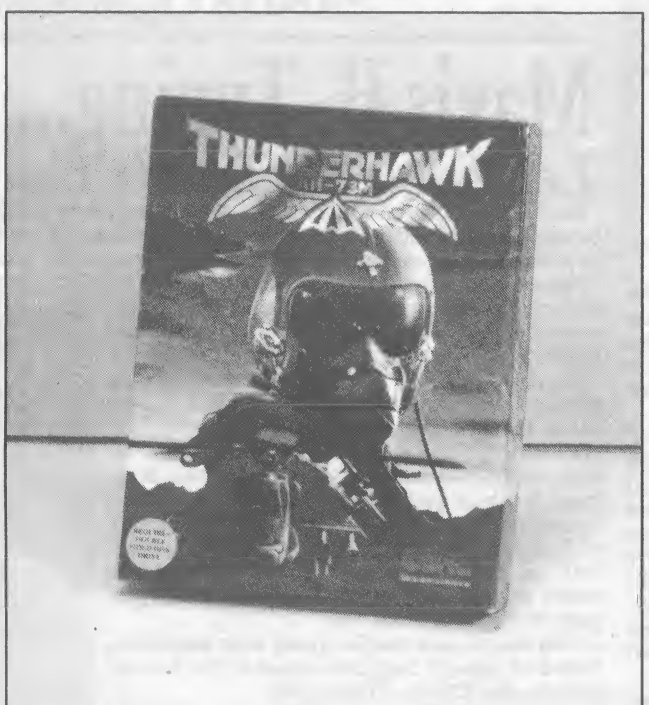

450-400 Atari ST Book 1 lb. \$16.95
450-410 Int/Adv Subjects 1 lb. \$16.95

450-440 ST 3-Book Library 2 lb. \$44.95

THUNDERHAWK Helicopter Simulator

Experience a Future Generation AH-73M

We all know how impressive the AH-64 Apache helicopters were in the Desert Storm war. This new simulation/game has you piloting a prototype advanced generation Attack Helicopter even more awesome than the Apache! You'll experience the fastest 3-D graphic system yet to appear on home computers. The simulation of high speed, low level flight is so smooth! Flight control, weapon select and targeting are all mouse controlled for complete ease of use. Extensive briefing and debriefing allow you to monitor your progress and better plan your flights/missions. There are even real night flying missions which incorporate night sight vision. And of course you are always under constant threat of attack from Mig 29s, SU-25s, Hind-As, Hokum and other surprises.

Scaled to a playing area of over 8,000 miles, ThunderHawk will give you all of the action you can handle. Pick up the phone... give us a call... we'll rush you a copy immediately!

280-637 ST ThunderHawk 1 lb. \$39.95

Multi-Tasking ON YOUR ST!

At Last, an ST System for True Multi-Tasking!

Mini-Review by Eben Brown

Our latest new product, MultiGEM is a true Multi-Tasking system for your Atari ST. You can have up to 6 programs running simultaneously, instantly switching between them as needed. I know, systems like this have been promised in the past and only gave limited function. Well, this one really works! It's been tested with some major ST applications including: PageStream, Calamus, Fleet Street Publisher, Word Flair, Word Writer, 1st Word, LDW Power, EZ Calc, even TOS based programs and many more. Imagine having the programs you most frequently use already up and running... accessible at the click of a mouse button!

MultiGEM is truly a different idea whose time has come. In use, it actually runs all six programs from the desktop. Size your usual window down a bit and there you'll see your disk icons. MultiGEM places your programs in the familiar Desktop Accessory slots so that they're easily accessed with a simple point and click of your mouse.

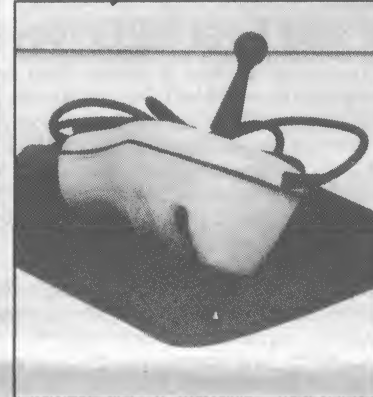

Probably the main reason MultiGEM works is its ability to allocate memory. Some programs automatically grab all available memory for themselves. MultiGEM will fool them into only taking what you want to give them! Of course, this system will multitask only as many things as you have memory for... a 4 meg machine will definitely have the advantage over a 1 meg. But, what better justification do you need for having additional memory? MultiGEM works with Atari ST/STE computers having TOS 1.2 or higher. Order your's today!

443-210 ST MultiGEM 1 lb.

List \$99.95 Our Price Only \$69.95!

Compressible Soft Joystick

Comfortable and Quick In Your Hand!

Our new ErgoStick brings a refreshing idea to joystick technology... COMFORT. We all know how the tension of a fast moving, joystick operated game will cause players to unconsciously squeeze or tense hand muscles around a joystick. Some joysticks have been offered in ergonomic shapes to improve user comfort with some success. This new ErgoStick goes a giant step further with both: Ergonomic shape AND soft/compressible construction. The finger grooves fit your hand and it's squeezably soft and grippable... no slipping. "Rubbery"... as our own Becky describes it. Add to this the tactile and audio feedback of micro-switch circuitry and you have the best of all possible worlds in a joystick. Order your's today!

280-644 ErgoStick 1 lb. \$24.95

THE MOUSEBALL IS BACK!

New Design, Easier To Use!

Our top selling original Mouseball I & II was actually a modified version of a surplus track ball. When the surplus ran out, we couldn't offer the Mouseball anymore. But you can't keep a great idea down for long! We're pleased to introduce the Mouseball III!

Our Mouseball III is a complete new design... built from the ground up to fit your hand and operate as a Mouse Ball. The ball rests under your thumb and the two buttons under your index and middle fingers. At a desk saving 6 1/8" X 4 1/8", the Mouseball III takes up very little space. It's high resolution too... 200 dpi!

If you missed out on our original Mouseball, don't pass up this new one. Order your Mouseball III today!

341-200 ST MouseBall III 2 lb.

Mailing List Manager

THE Software for Business & Membership Lists

If you maintain customer or membership mailing lists, Tracker ST is the software for you. Specially designed to meet the needs of list managers, it features extensive labeling printing capabilities. Even prints on your laser with no creeping. Tracker also gives you special computer aided data entry which saves up to 10,000 keystrokes per 250 names. Membership and subscription list managers will appreciate the one-step subscription adjustment feature. It automatically adjusts the remaining time at a single command.

Tracker has an unlimited "Notes" feature for each record. Jot in whatever you want. It also has unlimited data capacity. Whatever your floppy or hard drive can hold... that's how much your Tracker can manage. You can also have full reports to screen or printer including easy to use grouping, sorting, counting, and summarizing. These reports can be sorted on any data field. You can even import other mailing lists in all popular formats or simple ASCII.

Tracker includes printer drivers for Epson 9 and 24 pin, NEC 24 pin, Atari SLM laser printer, HP Deskjet and Deskjet Plus, and HP IIP laser printers and compatibles. In addition, you can easily create printer drivers for unusual printers.

If you manage a business or membership mailing list, Tracker ST is the software for you. Order today!

by Eben Brown

Your Atari ST can become just about anything... even another computer! Our PC-Speed turns it into a fast (Norton S.I. 4.0) 8088 based PC/XT. And our genuine -286 based AT-Speed C16 (16MHz) turns it into an IBM PC/AT Compatible.

The past year has been a tough one for PC emulators. The big name one that everyone waited for turned out to be an oversized, ill-fitting disappointment. A newer one that costs as much as a complete new PC Clone computer has problems because it uses drive partitions out of sequence. The ones that have gotten the least publicity but that deserve all of the applause are PC-Speed and AT-Speed C16. I recently installed one of these little beauties in my own ST and was absolutely amazed.

On STs you piggy-back solder a socket over the legs of your 68000 chip... alot easier than I thought at first (The trick is to use an electronics soldering iron... can't overheat and cheap at Radio Shack). On STEs, you plug a solderless adaptor into the 68000 socket. Finally, you plug the PC or AT-Speed C16 board onto the socket and close up your computer. Run the PC/AT-Speed C16 software and your ST turns into a PC compatible that runs at top speeds! Mine simply FLIES compared to the Tandy 1000SX (PC Compatible) we have here in the office. What about extras? You can set PC or AT-Speed C16 up to emulate CGA, Hercules, and Olivetti graphics adaptors. AT-Speed C16 also emulates EGA and VGA! You can install it on hard or floppy drives and boot DOS from either. It can use the same partition labels as your ST or you can reassign different ones if you want. It supports the regular Atari hard Drive, ICD Advantage based hard drives, Astra Systems drives, our Supra 5 2, and something called Multi. PC and AT-Speed C16 also support an RS232 mouse, emulate Microsoft Mouse and Cursor-Mouse.

Installing with memory boards presents a special situation for owners of older (external drive) Atari 520STs. The PC or AT-Speed C16 board interferes with one of the connectors of our ZRAM. If you have an original 520ST (no internal drive) we recommend that you install AT-Speed C16 with the Solderless RAM (aka Aerco) board as there is no interference.

So, now you have the scoop. PC-Speed is the 8088 based PC/XT emulator of choice. The -286 based AT-Speed C16 is the AT emulator of choice. And you can get either at a ridiculously low price from E. Arthur Brown Company!

280-718 AT-Speed C16 1 lb. Only \$369.95 280-724 PC-Speed 1 lb. \$199.95

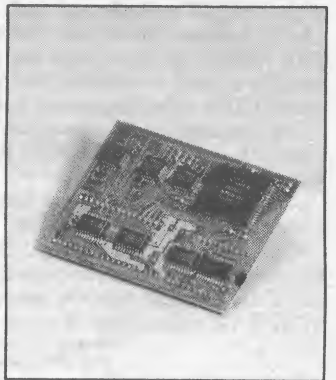

280-722 PC/AT Speed Installation \$50ppd-USA

If you'd like us to install PC Speed or AT-Speed C16 for you, send your Atari ST via insured UPS. We will test it. If it is operating properly, we'll install the emulator and ship your computer back via the same insured UPS for \$50. We don't do repairs... Do not ship a computer that isn't working properly to begin with. STE owners there is an extra charge for an STE Adaptor unit... \$69.95.

TC POWER-EMULATOR MEMORY MANAGER

This software allows AT/PC Speed to use extra memory on-board the ST for EMS (Extended Memory) which is very useful for programs such as Lotus 1-2-3, Quattro, AutoCAD, Symphony, etc. Without TC-Power, extra memory can only be used as RAM disks or print spoolers.

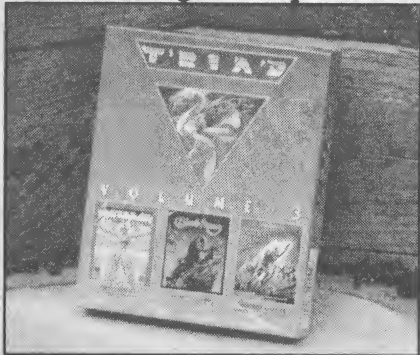

280-723 TC-POWER 1 lb. \$49.95

ST Triad 3... \$39.95

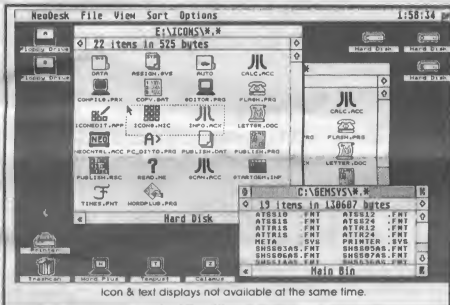

SpeedBall, Blood Money, & Rocket Ranger... Top Games!

This new Triad multi-game package is really something. SpeedBall is the original BitMap Brothers hit game that swept Europe. Total action and aggression! Blood Money... one of our best sellers and recently only available by itself. Superb Psygnosis graphics and weirdness! And finally, Rocket Ranger from CinemaWare. Graphics like reading an animated comic book. Story lines like the 1940s... you'll love this famous hit game! Order Triad III today!

Aegis Animator Liquidation... \$19.95!

by Eben Brown

Aegis... the Ultimate, Professional ST Animation program... liquidation priced! We found an overstock of these excellent programs with manuals and made a deal. Originally \$90, you can have your own Aegis Animator for only \$19.95!

Aegis Animator combines metamorphic, cel, and color cycle animation methods for use together or separately. Animations are built visually on the screen using interactive tools that make it easy to see what you are creating. Metamorphic "Tweening" actually creates everything between the beginning position or shape and ending position or shape... with up to 200 tweens per second! This results in smooth animation.

You can create your animations entirely with Aegis Animator or import "cels" (pictures) from paint programs in .NEO format. Our GFA Artist supports .NEO for example. Use cels for animation backgrounds or for actual objects... letting Aegis Animator sequence and play them.

Color Cycling moves colors through a range of blocks in the color palette allowing animation of repetitive movements... such as a waterfall, or airplane propeller.

Aegis Animator is a must purchase for your ST. Whether you use it for business, pleasure, or education... you shouldn't pass up this opportunity to obtain it at this liquidation price. Satisfaction Guaranteed... Try it for 10 days and if not satisfied return in new condition for a refund less shipping costs. Aegis Animator requires a minimum of 512K RAM and a Color Monitor.

445-300 Aegis Animator 1 lb. (List \$90) Only \$19.95

MasterCAD...\$19.95!

Originally \$250... Professional 3D CAD

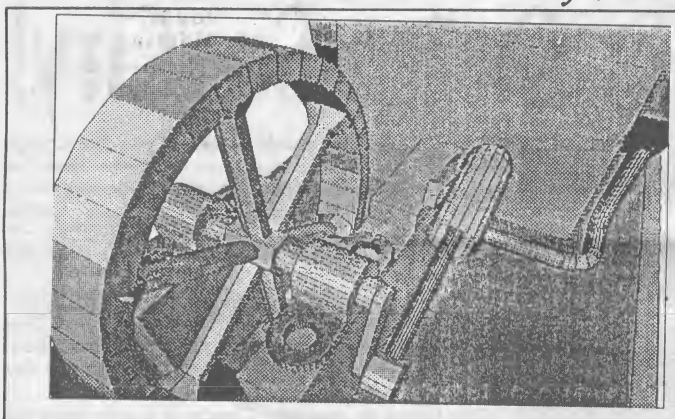

MasterCAD is famous for introducing a revolutionary concept in graphic design which allows the user to project any two-dimensional figure into a three-dimensional image! You can create astounding effects easily without spending endless hours building data matrices or learning to manipulate a primitive and confusing user interface.

MasterCAD's structured interface lets you control variables and parameters so you can select the best view to work from, define projection planes, and build any object you want. Auto-Dimensioning calculates the exact distance between points on a drawing, saving vast amounts of time.

Here's something amazing: MasterCAD's screen is actually a window into a larger workspace extending more than 2,300 miles in either direction! Originally priced at \$250, you can order this professional 3D CAD package for only \$19.95 from E. Arthur Brown Company. Don't pass this up!

101 Ready Made SpredSheets... \$24.95

LASER & COPIER TONER CARTRIDGE SERVICE

Long Life REPLACEMENT DRUMS

Canon-style toner cartridges with the smaller diameter (1") drums can be refitted with our hard surfaced Long Life Drum to give extended life. In fact, we guarantee cartridges equipped with this drum to give good images for 5 recharges and they may possibly last up to 10 recharges...which compares to 1-3 good recharges on a standard new cartridge drum. So, rather than buy a new cartridge when your drum wears out, order a Long Life Drum installed with your next recharge. It'll cost less than a new cartridge and last a lot more recharges... saving you even more money!

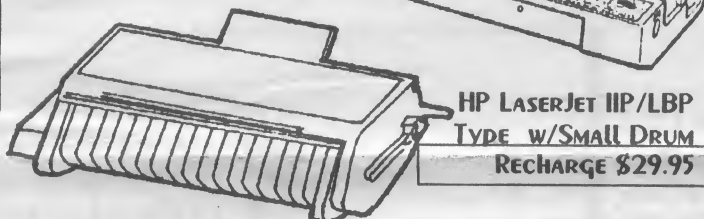

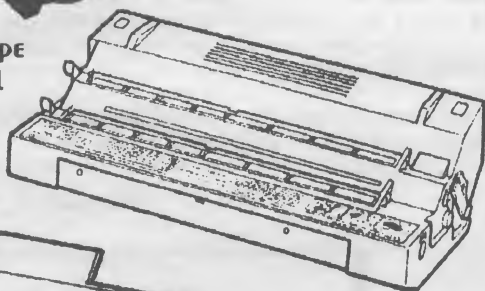

Please note, we only have replacement drums for the small diameter drum Canon-type toner cartridges. These include HP Laserjet and Small PC copier cartridges such as PC3,5,6,7 (aka A15 and A30 cartridges). These Long Life Drums sell for \$49.95 which includes free installation.

Also \$29.95: PC 3,5,6,7 (aka A15,A30 Cartridges)

We ReBuild DRUM UNITS...\$39.95

Sharp Z50/55/70 Series Drum Units and Atari SLM804 Laser Drum Units must normally be replaced every 9,000 images or so at a cost of \$160-\$200. OUCH! Really, the only things wrong with them at this point are: A build-up of excess toner in the auger assembly, overall dirtiness from toner dust, drum oxidization, and possibly static build up. As long as there are no obvious dings or scratches in the drum, we can rebuild it to give extended life and big savings.

Our Z50/55/70 process involves disassembly and complete cleaning of excess toner receptacles, augers, wiper blades, etc. Wiper blades get an anti-static treatment. We then apply a de-oxidizing treatment to the drum surface and buff to a mirror finish.

Our Atari SLM804 process requires that you send in both: Your drum and your toner hopper assembly. Be sure to bag and pack the toner hopper separately to keep it from getting everything dirty. We will completely clean the toner hopper assembly and

give anti-static treatment to the magnetic disbursement roller. We'll empty and vacuum the excess toner auger assembly, clean and anti-static treat the wiper blades. Then, we'll apply a de-oxidizing treatment to the drum surface and buff to a mirror finish.

DRUM REBUILD GUARANTEE

We do not guarantee against scratches, dings, over exposure to light, or other drum damage. Nor do we guarantee that our process will repair such damage. It shall be your responsibility to determine if your drum is in suitable condition for our Rebuild process. We guarantee for 30 days that your Rebuilt Drum Unit will give image quality at least as good as it was giving before you sent it in. If you feel your Rebuilt Drum Unit is not performing up to that standard, return it to us within 30 days of receiving it and we will re-do the process at no cost to you. If the re-do is still not satisfactory, we will have to conclude that the Drum Unit is simply too worn or old to give satisfactory service... a condition over which we have no control. Considering materials, labor, and shipping expended at that point, we do not grant refunds.

VOLUME DISCOUNTS FOR EVERYONE

Send in one Sharp Z50/55/70 or Atari SLM804 Drum Unit for Rebuilding @ \$39.95 and include \$3 shipping. Send in a Sharp Drum Unit and 1 or more Toner Cartridges for Recharging and we'll pay the shipping. Send in one Atari Drum unit and an order for 1 or more new Atari SLM804 toner cartridges and we'll pay the shipping (We can't recharge SLM804 toner cartridges). On Drum ReBuilds, we accept payment with your order via Check, Money Order, or Credit Card. Sorry, No COD's.

How To Ship Your DRUM UNIT

When sending your Drum Unit to us, remember that it is VERY SENSITIVE TO SCRATCHING and LIGHT EXPOSURE. If you have the original black bubble wrapper, use it. Otherwise, dark plastic garbage bags work very well as protective wrapping. If you don't have the original drum unit box, use crumpled newspaper for packing in any box. BE SURE NOTHING HARD OR SHARP IS TOUCHING THE DRUM!

Address your packed and boxed toner cartridge to: E. Arthur Brown Company, Toner Recharge Services, 3404 Pawnee Drive, Alexandria, MN 56308. Ship via Post Office or UPS and insure for new replacement cost. Please allow 2 weeks for delivery.

TONER RECHARGES FROM \$29.95!

We Do A Careful, Reliable, Clean Job... You Save Money/Help Environment!

by Eben Brown

If you're paying \$100-\$150 for laser or copier toner cartridges, please consider our Toner Recharging Service. Chances are, the cartridge you're throwing away has completely re-usable machinery such as gears, rollers, wiper blades, drums, and of course lots of plastic. Our service can re-use all of that equipment, save some environment in our nation's landfills, and save you a lot of money to boot! Here's the story:

Why TONER RECHARGING Works

Most popular personal copiers and laser printers use toner cartridges that contain a large portion of the imaging machinery. The idea is to cut maintenance by replacing this machinery with every refill of toner. In reality, this machinery doesn't wear out anywhere near as fast as you go through toner... it is still in good shape when you throw out the empty cartridge.

What a waste!

Our Toner Recharge Process involves disassembly and complete cleaning of the empty cartridge machinery. After cleaning and anti-static treatments, we seal the cartridge and fill it with fresh toner. Then, we seal it in an anti-static bag... just like a new cartridge.

MANY CARTRIDGES ARE RECHARGEABLE!

To say that we recharge Canon, Apple, Hewlett-Packard, Mita, and Sharp type laser printer and copier cartridges doesn't tell you much. The fact is, many other brands use the same cartridges with a different brand name on them. If you have a cartridge that looks like one of the drawings on this page, we can recharge it. (Note: Atari SLM804 cartridges can't be recharged).

Many popular laser printers use the Canon cartridge system: Apple, Hewlett-Packard, Blaser, Data General, Cordata, Imagen, Canon (of course), QMS, Olivetti, Sun, Star, Wang, and many more. Sharp type cartridges include the Xerox 5008. Mita type cartridges include Silver Reed SR10/20, Swintec SW800, and Adler 2008/2010. Both Sharp and Mita cartridges require separate replacement of toner and developer and are therefore slightly more expensive than Canon recharges.

Canon PC Copiers have rechargeable toner cartridges, too. We can recharge PC3, PC5, PC6, PC7, PC10, PC14, PC20, PC24, PC25, and PC70 toner cartridges.

Various other companies have imaging machines such as FAXes that use rechargeable cartridges. Check the pictures on this page. If your cartridge looks something like the drawing, we can probably recharge it. Send it in. If we can't do it, we'll return your cartridge to you at no cost.

TONER RECHARGE GUARANTEE

We guarantee our Toner Cartridge Recharge Process for 90 days to give results comparable to what your cartridge was giving before you sent it in. That is, if it was giving excellent results, it will most likely start right out at that level of quality with fresh toner installed. If it was giving poor images, it might still give poor images depending on the reason. Our recharge process involves cleaning as well as discharging of static build-up. If these were the cause of previous bad images, then the recharge could improve your image quality. If, however, the poor quality is due to drum or other wear, our recharge service will most likely not correct the image process. Some cartridges show wear in their image after 1-2 recharges. Others give good service for many recharges. It shall be your responsibility to determine whether your image quality merits giving your cartridge a recharge.

RETURNS, REFUNDS, AND RE-DO'S

If you determine that your cartridge has been recharged improperly, send it back and we will re-do the process at no cost to you. We will provide this service up to 90 days after the recharge was done assuming minimal toner has been used. If the re-done cartridge still gives poor results, it will be assumed that it is incapable of good service regardless of recharge quality (ie. it is worn out). This is a situation over which we have no control and considering materials, labor, and shipping costs expended at that point, we do not grant refunds.

VOLUME DISCOUNTS FOR EVERYBODY!

Send one cartridge for recharging and include \$3 shipping. Send two or more and we pay the shipping. Send 10 or more and we pay the shipping and give a 10% discount! If you're considering a larger volume, please call 612/762-8847 for a quote. On Toner

Recharges we accept payment with your order via Check, Money Order, or

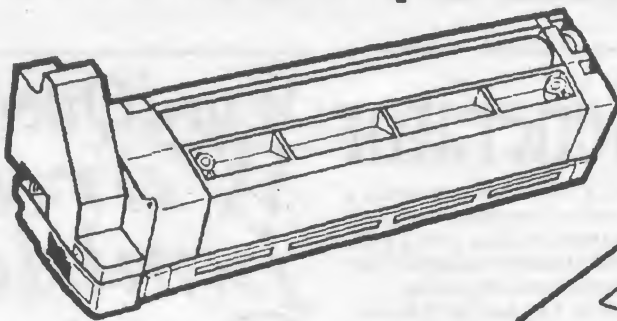

Credit Card. Sorry, No COD's.

How To Ship YOUR CARTRIDGES

If you can, enclose your cartridge in a plastic bag before packing... this keeps the box clean. The box and packing your toner cartridge came in is usually perfect for shipping. Use it! Otherwise, crumpled up newspaper makes good packing in any box. Be sure to also send your felt fuser wand if you have one. We'll put a clean felt on it.

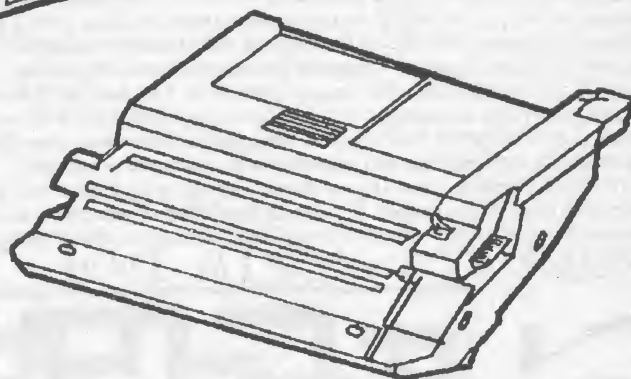

Address your packed and boxed toner cartridge to: E. Arthur Brown Company, Toner Recharge Services, 3404 Pawnee Drive, Alexandria, MN 56308. Ship via Post Office or UPS and insure for new replacement cost. Please allow 2 weeks for delivery.

Last year we got hold of a large overstock of *GFA Draft Plus*, *Artist*, and *Ray Trace*... all of which sold out before most of our customers had a chance to order. **GOOD NEWS:** We found a warehouse full of instruction manuals for these products... but no disks or fancy boxes. A few telephone calls later, we acquired the rights to duplicate the disks ourselves and bought the whole lot of many shrink wrap along with them!

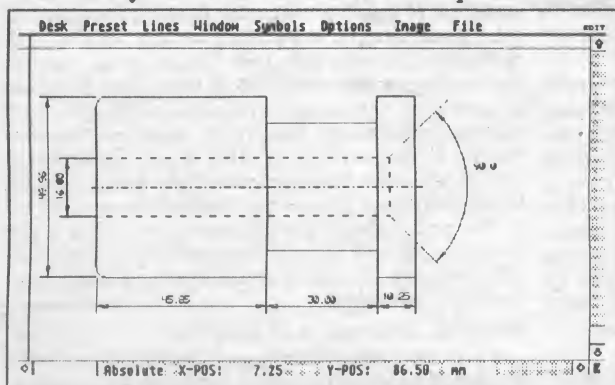

Think of it: *GFA Draft Plus* (Originally \$150), a super CAD package which you can order with the complete instruction manual for only \$19.95! *GFA Artist* (Originally \$100), the best Paint/Draw/Animation program we've seen in 5 years of Atari ST marketing... your's complete with instruction manual for only \$19.95! And finally, *GFA Ray Trace* (Never released in the USA), an actual Light Ray Tracing graphics package... creates those amazing reflections and shadows that were previously the domain of Super Computers... Yes you can have it with the instruction manual for only \$19.95!

Money Back Guarantee! Hey, we own the rights to these programs, we can do whatever we want with them, AND WE WANT HAPPY CUSTOMERS! Try *GFA Draft Plus*, *Artist*, or *Ray Trace* for 10 days. If you don't like it for any reason, return it in new condition for a refund less shipping costs.

Order Today! As was the case last time we liquidated these titles, we expect to sell out fast. Please don't put it off... send or call in your order right away!

GFA Liquidation

GFA DRAFT PLUS... Only \$19.95!

Here's your chance to own a sophisticated Computer Aided Design (CAD) program for your Atari ST. It comes on two single sided 3.5" disks, works in color or monochrome, and requires a minimum of 512K of RAM... in other words, it works on all Atari STs!

Use *GFA Draft Plus* to design anything from architecture, to industrial and commercial products to even electronics. It has automatic dimensioning as well as scaling. Put a different scale into it and your dimensions will recalculate automatically! Create your own design symbols which can later be enlarged, duplicated, etc. Or, use the complete library of design symbols included on the *GFA Draft Plus* Data Disk (included).

Whether you plan to do alot or a little CAD work on your Atari ST, don't pass up this opportunity to own a

professional software system. Originally this was \$150... we believe it still costs that much everywhere else in the world. Order from E. Arthur Brown Co. for only \$19.95!

#250-931 GFA Draft Plus 2 lb. \$19.95

GFA ARTIST...PAINT, DRAW, ANIMATE... Only \$19.95

When *GFA Artist* first came out, it was distinguished from *DEGAS*, *Spectrum 512*, and *Quantum Paint* by its full megabyte memory requirement, full animation capability, and relatively high price of \$100. What most folks didn't know was about its advanced color palette modes and unique manipulating features. For example, Low resolution can be used in normal mode. Or, you can go to a "static" mode and display over 1,000 colors on your screen at any time. Or, while displaying your work in low res, you can display the function selector menu in medium resolution... making it easier to see and choose your tools. How about this: You can create an object on your screen... Make it out of text or just draw it. Then, you can create an actual perspective display... you know how things get smaller the further they are away from you? And how about that animation? With *GFA Artist*, you can create the evolving drawings to build the animation, link and loop them together. Finally, you can show off your work to friends. A Movie program is included that you can give them with your animation files. They don't need *GFA Artist* to see your work in full action packed beauty!

Whether you enjoy just creating pretty computer pictures, or like going into sophisticated stuff like animation, this *GFA Artist* deal is one you won't want to pass up. We believe its still \$100 everywhere else in the world. Only \$19.95 if you order NOW from E. Arthur Brown Company. This program requires a color monitor and at least 1 megabyte of RAM.

#250-960 GFA Artist 2 lb. \$19.95

GFA RAY TRACE...

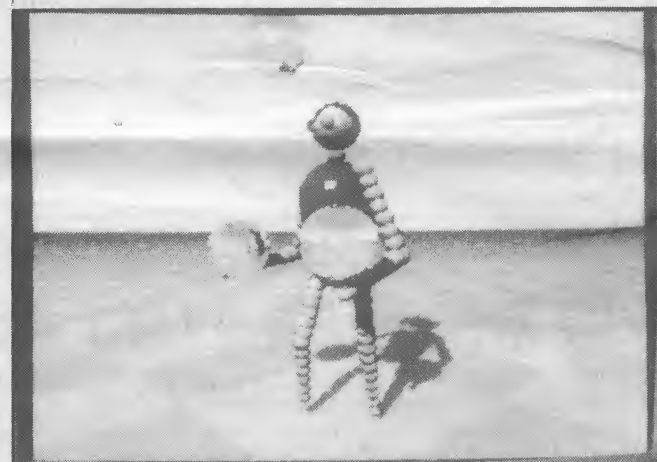

CREATE CRAY SUPER

COMPUTER-LIKE ANIMATED SHADOWS & REFLECTIONS... \$19.95

If you've seen the sophisticated demo animations of "the Juggler" and others, you know what a fascinating computer science is involved with light ray tracing. For example, you create a mirror shiney ball moving across your computer screen. As it moves, you can see moving reflections in its surface and observe as it its shadow changes relative to the source of light. The reflection takes into account the curvature of the ball's surface as well as the 3-D positions of all objects and even the opaqueness of solids. Calculating all of the changing light paths for such an animation used to be the realm of only super computers like the Cray... but now you can do it on your Atari ST!

GFA Ray Trace brings light ray tracing to the Atari ST. You can either create 3-D objects in memory or import them from your *GFA Artist*, *Neochrome*, *DEGAS*, or *Spectrum 512* software. Object types can have various opaqueness, dull or mirrored surfaces, changeable colors. You can import or build ground and sky patterns to create a 3 dimensional effect. Create up to 30 different light sources and move them wherever you want and set them for whatever color of light you want. Here's an interesting affect: Move your observation point forward, backwards, up or down, sideways... through your 3 dimensional image! Inventing animation is simple. You tell the computer the beginning and ending picture positions. It then calculates positions over the desired number of frames and saves the animation to disk automatically!

GFA RayTrace is an amazing, fun, interesting addition to your Atari ST. It comes on a double sided 3.5" diskette so you'll need a double sided floppy drive. Otherwise, it works in either color or monochrome. Don't pass up this excellent bargain... Order Today!

250-725 GFA RayTrace 2 lb. \$19.95

CrossWord Generator

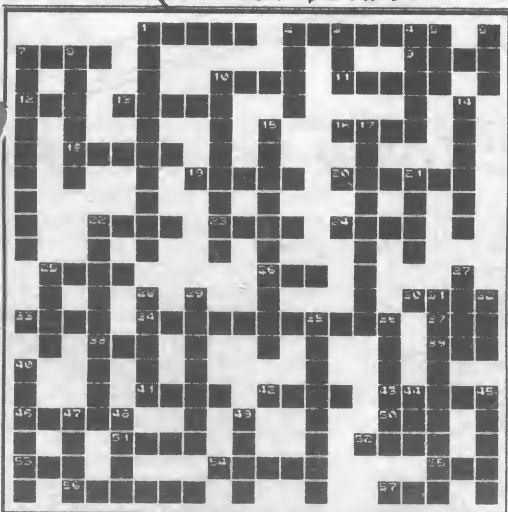

Load our Word Q2 software into your Atari ST/STE and it becomes a sophisticated crossword puzzle generating machine. You give it the words you want in the puzzle and it automatically arranges them onto a grid, numbers the squares, and fills in the empties. All you have to add are your clues and you have a genuine computer generated crossword puzzle!

Word Q2 generates crossword puzzle grids from 5X5 to 20X20 in size. You can print them as standard ASCII files (no special printer driver required) or as *DEGAS* or *NEOchrome* files. Import them into your Desktop Publishing software and add a new twist to your next newsletter.

Word Q2 is flexible, too. If you don't like the way it lays out your puzzle, just have it recalculate. If you still don't like it, you can manually position all or part of the layout. You will like Word Q2... Order today!

WRD-Q2 ST Word Q2 1 lb. \$24.95

WordQuest Word Jumble Creator

You've seen the "Word Jumble" puzzles in the funny pages of newspapers? Well, now you can make your own puzzles for fun & profit using your Atari ST computer!

ST *WordQuest* is a unique application in that you give it a vocabulary of words, tell it which types of orientation to use, and then just let it go to work for you. What it'll do is fit your words into a jumble, crossing over each other in various directions, and then fill in the remaining spaces with random letters. If you don't like how it comes out, you just tell it to re-figure and you get a completely different puzzle with the same words!

Use ST *WordQuest* to design word jumbles for your kid's weekly spelling words. Use it to spice up a newsletter with custom terminology. Or, call your local newspaper and hire out your services for a local daily or weekly jumble. All you need are the words and you can assemble a jumble puzzle in just a few minutes!

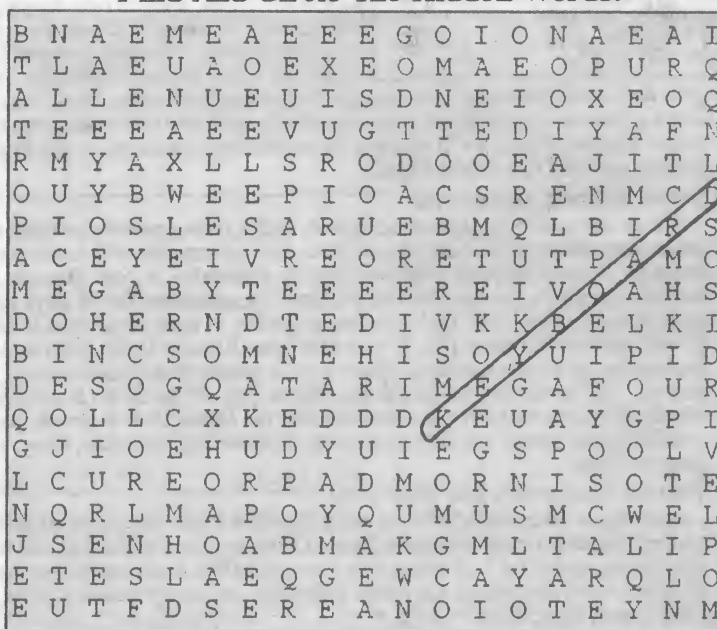

Your Jumbles can be as difficult or easy as you want. With adjustable grid sizes and selectable vertical, horizontal, and diagonal positioning, they can be configured for adults as well as children. Printout to Epson compatible printers is supported too. ST *Word Quest* is a valuable addition to any Atari ST system. Order your's today.
